An in-depth introduction to Intelligent Energy Field Manufacturing (EFM), this book explores a fresh engineering methodology that not only integrates but goes beyond methodologies such as Design for Six Sigma, Lean Manufacturing, Concurrent Engineering, TRIZ, green and sustainable manufacturing, and more. This book gives a systematic introduction to classic non-mechanical manufacturing processes as well as offering big pictures of some technical frontiers in modern engineering. The book suggests that any manufacturing process is actually a process of injecting human intelligence into the interaction between material and the various energy fields in order to transfer the material into desired configurations. It discusses technological innovation, dynamic M-PIE flows, the generalities of energy fields, logic functional materials, and intelligence. The open scheme of intelligent EFM implementation and the principles of intelligent EFM. The book takes a highly interdisciplinary approach that includes

research frontiers such as micro nano fabrication high strain rate processes laser shock forming materials science and engineering bioengineering etc in addition to a detailed treatment of the so called non traditional manufacturing processes which covers waterjet machining laser material processing ultrasonic material processing EDM ECM etc Filled with illustrative pictures figures and tables that make technical materials more absorbable the book cuts across multiple engineering disciplines The majority of books in this area report the facts of proven knowledge while the behind the scenes thinking is usually neglected This book examines the big picture of manufacturing in depth before diving into the deta
