Software Quality Assurance Stephan Goericke, 2019-11-19 This open access book published to mark the 15th anniversary of the International Software Quality Institute iSQI is intended to raise the profile of software testers and their profession. It gathers contributions by respected software testing experts in order to highlight the state of the art as well as future challenges and trends. In addition, it covers current and emerging technologies like test automation, DevOps, and artificial intelligence methodologies used for software testing before taking a look into the future. The contributing authors answer questions like: How is the profession of tester currently changing? What should testers be prepared for in the years to come and what skills will the next generation need? What opportunities are available for further training today? What will testing look like in an agile world that is user centered and fast paced? What tasks will remain for testers once the most important processes are automated? iSQI has been focused on the education and certification of software testers for fifteen years now and in the process has contributed to improving the quality of software in many areas. The papers gathered here clearly reflect the numerous ways in which software quality assurance can play a critical role in various areas. Accordingly, the book will be of interest to both professional software testers and managers working in software testing or software quality assurance.

The Analytic Hierarchy Process (AHP) in Software Development (Digital Short Cut) Bijay K. Jayaswal, Peter C. Patton, Ernest H. Forman, 2007-03-01 This is the eBook version of the printed book *The Analytic Hierarchy Process*. AHP is an advanced technique that supports decision makers in structuring complex decisions, quantifying intangible factors, and evaluating choices in multiobjective decision situations. It is a comprehensive and rational decision making framework that provides a powerful methodology for determining relative worth among a set of elements. AHP is especially suitable for complex decisions that involve the comparison of decision elements which are difficult to quantify. The AHP and its more recent version, the Analytic Network Process (ANP), were developed by Dr. Thomas Saaty and have been applied in a wide variety of decision situations in organizations worldwide. AHP is particularly applicable in managing software complexity and in Quality Function Deployment (QFD) as presented in Chapter 11 of the book *Design for Trustworthy Software*. This short cut illustrates the application of AHP in prioritizing complex design issues. It also shows how AHP and its supporting software, Expert Choice (EC), can handle much higher levels of complexities accurately and expeditiously than the prioritization matrices introduced in Chapter 7 of *Design for Trustworthy Software*. In addition to solutions facilitated by EC, this short cut also illustrates two known approximations to AHP solutions using manual calculations. Manual calculations can be used to solve relatively less complex problems. They are presented in this short cut to illustrate the first principles and the steps involved in AHP. This short cut is a reproduction of Chapter 8 of the book *Design for Trustworthy Software* and introduces AHP with a simple example. It can be used either as a methodology in trustworthy software design process or as a standalone introductory presentation on AHP. This short cut should be of interest to software and quality professionals. In particular, it would be of value to the CMMI, Six Sigma, and DFSS communities worldwide, especially those who have acquired or plan to
