

ASSESSMENT METHODS IN MEDICAL EDUCATION: A REVIEW

ISHTIAQ AHMED¹, SUNDAS ISHTIAQ²

ABSTRACT

Good assessment is a major challenge in medical education. One of the major obstacle to a comprehensive assessment is the lack of familiarity on the part of medical educators about proper selection and effective use of different assessment methods. This primer (review) gives an overview of the basic ideas and vocabulary that one should understand in order to evaluate the quality of any assessment tool designed for the purpose of evaluating the undergraduates, postgraduates or other medical professionals. Applicability and effectiveness of different assessment tools are described along with their limitations and advantages. In addition, assessment methods currently in use are reviewed with attention to their psychometric strength and weaknesses. The data was collected from cross sectional studies, review articles, books on medical education and from guidelines for assessment between 1956 to 2013. Websites and other online resources of medline, NCBI and medscape were used to extract the data.

KEY WORDS: Medical Education, Assessment, Assessment Tools, Performance, Curriculum, Learning.

INTRODUCTION

During last two decades the art and science behind medical learning and teaching i.e. medical education has progressed remarkably. The curricula are based on sound pedagogical principles. Learning and teaching have become more scientific, rigorous and problem based and other forms of active and self-directed learning have become the mainstream. The role of teachers has progressed to solution provider rather a problem-identifier^{1,2}.

During the last quarter of century the medical schools are facing variety of challenges from patients, society, doctors and students. They have responded in different ways in the form of new curricula development, the introduction of new learning methodologies, new methods of assessment and a realization of the importance of professional development of staff. Due to this, many interesting and effective innovations are made and put in practice^{3,4}.

The efficiency and effectiveness of health care delivery requires not only knowledge and technical skills but also needs good communication, analytical skills, interdisciplinary care, evidence and system based care. This can be achieved only if the assessment system is sound, comprehensive and robust enough to assess the requisite attributes as well as testing of essential knowledge and skills⁵. Realistically, the assessment should be purpose driven because it has a powerful positive steering effect on learning outcome and the curriculum. It serves multiple purposes for example, formative assessment are used for promoting reflection, guidelines for future learning and shaping values. Similarly, the summative assessment is used for judging an individual's cognitive achievements and clinical

performance. So, it conveys what we value as important and acts as the most cogent motivator of student learning. It is essential in designing and planning an assessment to identify and recognize the stakes involved in it. The higher the stakes, greater the implications of the outcome of assessment. Moreover, the more sophisticated the assessment strategies, the more appropriate they become for feedback and learning^{6,7}. In this era, the assessment is entering in every phase of professional development and considered crucial steps in the educational process. It is now used during the medical school application process, at the start of residency training and as part of the "maintenance of certification" requirements that several medical boards have adopted⁸. Some important questions must be asked before making a choice of assessment method i.e. what should be assessed?, why assess? Similarly, before deciding an assessment instrument one must also ask: is it valid? Is it reliable? Is it feasible? What is assessed and which methods are used will play a significant part in what is learnt⁹.

ASSESSMENT METHODS

According to the model proposed by Miller, various assessment methods are available to assess clinical competency of students¹⁰. The choice of assessment method will depend on the purpose of its use: whether it is for formative purposes (i.e. diagnosis, feedback and improvement), summative purposes (e.g. promotion and certification), or for both. The various characteristics of assessment tools are identified i.e. reliability, validity, feasibility, cost effectiveness and educational impact¹¹. Moreover, each assessment method has its advantages and disadvantages, so one assessment method will not assess all domains of competency. Therefore, whatever the purpose of assessment is a variety of assessment methods are required so that the shortcomings of one can be addressed appropriately¹². In 1990, Miller proposed a hierarchical model for the assessment of clinical competence. This model starts with the assessment of cognition and ends with the assessment of behavior in practice⁷ (Figure-1). According to this, the professional authenticity increases as we move up the hierarchy and as assessment tasks resemble real practice. The assessment of cognition deals with knowledge and its application (knows, knows how) and this could span the levels of Bloom's taxonomy

How to Use and Apply Assessment Tools in Medical Education? Said Elshama, 2022 Assessment in medical education usually gives the evidence that learning was carried out and the learning objectives were achieved The assessment program is a measurement tool to evaluate the progress in knowledge skills behaviors and the attitude of students So the planning for an effective assessment program should be based on instructional objectives instructional activities and efficient assessment methods Thus a well designed assessment procedure should be characterized by validity and reliability There are two methods for interpreting the results of students performance norm referenced and criterion referenced the first gives a relative ranking of students while the second describes learning tasks that students can and cannot perform The information that gets from the assessment results should be used effectively to evaluate and revise the instructional course for more improvement Therefore the reporting of the assessment results to stakeholders should be clear comprehensive and understandable to prevent misinterpretation that may affect students and other stakeholders adversely
