Turner,2021-02-22 There is some talk about an antibiotic Armageddon due to quickly developing resistance towards commercially available antibiotics For the most part the classical antibiotic pipeline has dried up and antibiotic resistance to any new drugs quickly develops It is here that metal based antimicrobials can step forward as possible solutions in this antimicrobial resistance era The biological targets of metal atoms are more diverse thus making it more difficult for bacteria to develop resistance compared with classical antibiotics The metal silver has been used since antiquity for wound healing and water purification At present it is the most prevalent antimicrobial metal used in healthcare industry and consumer products Silver is being used in the form of ionic salt colloids or in specific nanomaterials and as described in this book it can be applied as mixtures with other antimicrobials or coating composites The different formulations are explored for their efficacy against a variety of problems related to agricultural and medical infections Whilst by no means exhaustive this book nicely highlights the present directions in silver based antimicrobial research and antimicrobial formulation development The chapters have been organized from a general introductory review to approaches of mixing other antimicrobials and materials to enhance silver performance This is

followed by synthetic approaches First are biogenic sometimes called green or eco friendly approaches followed by advanced physical chemical synthetic approaches The book ends with an overview of applications through a review of patents over the past 10 years *Towards Synthesis of Micro-/Nano-systems* Fumihiko Kimura, Kenichiro Horio, 2006-10-19 At the beginning of the 21st century manufacturing industry is faced with new challenges stemming from globalization and the need for environmental sustainability The progress of micro nano technology means that precision engineering is now considered to be one of the core disciplines necessary for coping with the sometimes severe requirements of new product and system development From basic research to practical applications advanced process technological methods for the design and synthesis of micro nano systems are becoming more and more important This collection of papers includes high quality papers for industrial and scientific sources discusses leading edge technologies and forecasts future trends Topics covered include but are not limited to advanced manufacturing systems ultra precision and micro machining nanotechnology for fabrication and measurement rapid prototyping and production technology planning and scheduling for production and CAD CAE CAM Material Sciences and Manufacturing Technology Liang Zhong Jiang, 2012-12-27 Selected peer reviewed papers from the 2012 International Conference on Material Sciences and Manufacturing Technology ICMSMT 2012 October 5 6 2012 Dalian China **Nanotube Superfiber Materials** Mark Schulz, Vesselin Shanov, Zhangzhang Yin, 2013-09-16 Nanotube Superfiber Materials refers to different forms of macroscale materials with unique properties constructed from carbon nanotubes These materials include nanotube arrays ribbons scrolls yarn braid and sheets Nanotube materials are in the early stage of development and this is the first dedicated book on the subject Transitioning from molecules to materials is a breakthrough that will positively impact almost all industries and areas of society Key properties of superfiber materials are high flexibility and fatigue resistance high energy absorption high strength good electrical conductivity high maximum current density reduced skin and proximity effects high thermal conductivity lightweight good field emission piezoresistive magnetoresistive thermoelectric and other properties These properties will open up the door to dozens of applications including replacing copper wire for power conduction EMI shielding coax cable carbon biofiber bullet proof vests impact resistant glass wearable antennas biomedical microdevices biosensors self sensing composites supercapacitors superinductors hybrid superconductor reinforced elastomers nerve scaffolding energy storage and many others The scope of the book covers three main areas Part I Processing Part II Properties and Part III Applications Processing involves nanotube synthesis and macro scale material formation methods Properties covers the mechanical electrical chemical and other properties of nanotubes and macroscale materials Different approaches to growing high quality long nanotubes and spinning the nanotubes into yarn are explained in detail The best ideas are collected from all around the world including commercial approaches Applications of nanotube superfiber cover a huge field and provides a broad survey of uses The book gives a broad overview starting from bioelectronics to carbon industrial machines First book to explore the production and
