Autonomy And Foreign Language Learning In A Virtual Learning Environment Advances In Digital Language Learning And Teaching:

Autonomy and Foreign Language Learning in a Virtual Learning Environment Miranda Hamilton, 2013-06-13 Digitalised learning with its promise of autonomy enhanced learner choice independence and freedom is an intuitive and appealing construct but closer examination reveals it to be a rather simplistic proposition raising the following questions What do we mean by autonomy What are we implying about the role of the teacher the classroom and interaction between learners What do we understand about the impact of technology on the ecology of the learning environment This book describes the use of a Virtual Learning Environment VLE by a group of advanced English language learners in Mexico comparing what students thought and what they did in response to the technology The theoretical aim of the book is to work towards the construction of a theory of the development of autonomy and virtual learning in an EFL context Enhanced understanding about the relationship between autonomy and technology has the potential to inform academics software designers materials writers teacher educators and teachers and to help learners in their quest to acquire a foreign language Autonomous Language Learning with Technology Chun Lai, 2017-06-29 This book looks beyond the classroom and focuses on out of class autonomous use of technology for language learning discussing the theoretical frameworks key findings and critical issues The proliferation of digital language learning resources and tools is forcing language education into an era of unprecedented change The book will stimulate discussions on how to support language learners to construct quality autonomous technology mediated out of class learning experience outside the classroom and raise greater awareness of and research interest in this field Out of class learning constitutes an important context for human development and active engagement in out of class activities is associated with successful language development With convenient access to expanded resources venues and learning spaces today's learners are not as dependent on in class learning as they used to be Thus a deeper understanding of the terrain of out of class learning is of increasing significance in the current educational era Technology is part and parcel of out of class language learning and has been a primary source that learners actively use to construct language learning experience beyond the classroom Language learners of all ages around the world have been found to actively utilize technological resources to support their language learning beyond formal language learning contexts Insights into learners out of class autonomous use of technology for language learning are essential to our understanding of out of class learning and inform educators on how language learners could be better supported to maximize the educational potentials of technology to construct quality out of class learning experience Teacher Education in Computer-Assisted Language Learning Euline Cutrim Schmid, 2017-08-24 Even though many pre service and in service teacher programs now address information and computer technology computer assisted language learning CALL teacher education is still reported as inadequate Why is this This book elaborates on some of the existing concerns and through deft analysis of longitudinal data

begins to piece together a future road map for CALL teacher education The book adopts a sociocultural approach based on the principle that teaching and learning how to teach is a long term complex developmental process that operates through participation in social practices that come with the territory Euline Cutrim Schmid highlights the need for situated and localized learning pre service and in service collaboration and collaborative peer assisted learning Above all of this the book recommends and proves the efficacy of socially aware and professional reflective practice This is an essential sociolinguistic take on the computer learning revolution Language Teacher Education and Technology Jeong-Bae Son, Scott Windeatt, 2017-06-29 Language teachers competencies in computer assisted language learning CALL are a crucial factor affecting their own implementation of CALL However there is still a concern that many language teachers are not adequately prepared to make effective use of CALL or to identify and evaluate potential CALL solutions This can be the result of many different factors and raises the question of how to train teachers to develop their CALL knowledge and skills to a greater degree The discussion of approaches to training language teachers in the use of technology adopted in areas of Australia the UK and the US provides valuable insights for those already involved in this area and inspiration for those who have some interest in carrying out this kind of training but as yet have little or no experience This book explores the current status of CALL teacher education and discusses issues and challenges CALL teacher educators face in their own contexts Specifically it looks at postgraduate CALL courses offered at different universities to find ways of improving CALL teacher training It represents the first overview of a topic that is relevant to most postgraduate courses in Applied Linguistics or TESOL across the globe The use of technology for language learning and teaching is increasingly common but as is so often the case training for teachers in how to use that technology remains limited to a large extent by lack of expertise among trainers

Education Reimagined: The Impact of Advanced Technologies on Learning Mohammad Khalil, Mohammed Saqr, Sonsoles López-Pernas, Isabel Hilliger, 2024-12-18 The last decade has seen significant progress in technology particularly in the fields of Artificial Intelligence and machine learning which have had a profound impact on numerous industries including education The integration of technology in education has fundamentally altered the landscape of learning where data becomes a crucial component to provide insights into for example how students learn when and where additional support is needed Employing educational data is proving to be a catalyst for innovation in education opening up new possibilities for students and educators alike The focus of this Research Topic is to explore the impact of recent technological innovations and advances such as AI powered Chatbots Learning Analytics Virtual and Augmented Reality and remote and virtual labs on different education systems both from the educational and the psychological perspective The scope is twofold on the one hand examining the use of these advanced technologies in learning and teaching activities and on the other hand teaching students about these technologies and understanding the impact of including them in new education policies and curricula including teaching of AI data science analytics and the ethical implications of data The Research Topic

seeks to provide insightful and thought provoking perspectives on how technology is being utilized to enhance the learning experience for students of all ages Both in higher education and K12 education and their transition to higher education By gathering experts in psychology education and technology this Research Topic aims to present research findings and best practices and to stimulate discussions on the role of technology in shaping the future of education The ultimate objective is to inspire innovation and to improve the education of future generations through advanced technologies **Language**
