when addressing resource and investment decisions Therefore corporations need to establish organizational measures to incorporate the risks associated to GETs into the strategic management process and to avoid harm to the corporate portfolio The scientific contribution of this thesis is a tool called GET assessment framework which can be applied within strategic business planning to tackle risks associated to GETs The intent of the tool is to analyze the impact of a trend to the actual business situation of the corporation and to help the management to formulate and to establish counter measures within a scenario planning To prove its applicability the GET scarcity of resources is used to demonstrate how the shortage of oil is affecting a virtual corporation that is operating within the chemical industry which is a recent problem to business planning in the industry Using the concept of corporate evaluation which is introduced within the assessment framework potential risks are identified By this means external risks are mapped to the internal environment of the corporation and countermeasures are developed
