Automata, Computability and Complexity Elaine Rich, 2008 For upper level courses on Automata Combining classic theory with unique applications this crisp narrative is supported by abundant examples and clarifies key concepts by introducing important uses of techniques in real systems Broad ranging coverage allows instructors to easily customise course material to fit their unique requirements

The Theory of Info-Dynamics: Rational Foundations of Information-Knowledge Dynamics Kofi K. Dompere, 2017-12-06 This book focuses on the development of a theory of info dynamics to support the theory of info statics in the general theory of information It establishes the rational foundations of information dynamics and how these foundations relate to the general socio natural dynamics from the primary to the derived categories in the universal existence and from the potential to the actual in the ontological space It also shows how these foundations relate to the general socio natural dynamics from the potential to the possible to give rise to the possibility space with possibilistic thinking from the possible to the probable to give rise to possibility space with probabilistic thinking and from the probable to the actual to give rise to the space of knowledge with paradigms of thought in the epistemological space The theory is developed to explain the general dynamics through various transformations in quality quantity space in relation to the nature of information flows at each variety transformation The theory explains the past present future connectivity of the evolving information structure in a manner that illuminates the transformation problem and its solution in the never ending information production within matter energy space under socio natural technologies to connect the theory of info statics which in turn presents explanations to the transformation problem and its solution The theoretical framework is developed with analytical tools based on the principle of opposites systems of actual potential polarities negative positive dualities under different time structures with the use of category theory fuzzy paradigm of thought and game theory in the fuzzy stochastic cost benefit space The rational foundations are enhanced with categorial analytics The value of the theory of info dynamics is demonstrated in the explanatory and prescriptive structures of the transformations of varieties and categorial varieties at each point of time and over time from parent offspring sequences It constitutes a general explanation of dynamics of information knowledge production through info processes and info processors induced by a socio natural infinite set of technologies in the construction destruction space

A General Theory of Entropy Kofi Kissi

Dompere, 2019-08-02 This book presents an epistemic framework for dealing with information knowledge and certainty uncertainty problems within the space of quality quantity dualities It bridges between theoretical concepts of entropy and entropy measurements proposing the concept and measurement of fuzzy stochastic entropy that is applicable to all areas of knowing under human cognitive limitations over the epistemological space The book builds on two previous monographs by the same author concerning theories of info statics and info dynamics to deal with identification and transformation problems respectively The theoretical framework is developed by using the toolboxes such as those of the principle of opposites

systems of actual potential polarities and negative positive dualities under different cost benefit time structures The category theory and the fuzzy paradigm of thought under methodological constructionism reductionism duality are used in the fuzzy stochastic and cost benefit spaces to point to directions of global application in knowing knowledge and decision choice actions Thus the book is concerned with a general theory of entropy showing how the fuzzy paradigm of thought is developed to deal with the problems of qualitative quantitative uncertainties over the fuzzy stochastic space which will be applicable to conditions of soft hard data fact evidence and knowledge over the spaces of problem solution dualities decision choice actions in sciences non sciences engineering and planning sciences to abstract acceptable information knowledge elements

Computability, Complexity, and Languages Martin D. Davis, Elaine J. Weyuker, 2014-05-10 Computability Complexity and Languages Fundamentals of Theoretical Computer Science provides an introduction to the various aspects of theoretical computer science Theoretical computer science is the mathematical study of models of computation This text is composed of five parts encompassing 17 chapters and begins with an introduction to the use of proofs in mathematics and the development of computability theory in the context of an extremely simple abstract programming language The succeeding parts demonstrate the performance of abstract programming language using a macro expansion technique along with presentations of the regular and context free languages Other parts deal with the aspects of logic that are important for computer science and the important theory of computational complexity as well as the theory of NP completeness The closing part introduces the advanced recursion and polynomial time computability theories including the priority constructions for recursively enumerable Turing degrees This book is intended primarily for undergraduate and graduate mathematics students
