Automate This How Algorithms Took Over Our Markets Our Jobs And The World Author Christopher Steiner Dec 2013:

Automate This Christopher Steiner, 2012-08-30 The rousing story of the last gasp of human agency and how today's best and brightest minds are endeavoring to put an end to it. It used to be that to diagnose an illness, interpret legal documents, analyze foreign policy or write a newspaper article you needed a human being with specific skills and maybe an advanced degree or two. These days high level tasks are increasingly being handled by algorithms that can do precise work not only with speed but also with nuance. These bots started with human programming and logic but now their reach extends beyond what their creators ever expected. In this fascinating, frightening book Christopher Steiner tells the story of how algorithms took over and shows why the bot revolution is about to spill into every aspect of our lives, often silently without our knowledge. The May 2010 Flash Crash exposed Wall Street's reliance on trading bots to the tune of a 998 point market drop and 1 trillion in vanished market value. But that was just the beginning. In *Automate This* we meet bots that are driving cars, penning haiku and writing music mistaken for Bach's. They listen in on our customer service calls and figure out what Iran would do in the event of a nuclear standoff. There are algorithms that can pick out the most cohesive crew of astronauts for a space mission or identify the next Jeremy Lin. Some can even ingest statistics from baseball games and spit out pitch perfect sports journalism indistinguishable from that produced by humans. The interaction of man and machine can make our lives easier. But what will the world look like when algorithms control our hospitals, our roads, our culture and our national security? What happens to businesses when we automate judgment and eliminate human instinct? And what role will be left for doctors, lawyers, writers, truck drivers and many others? Who knows, maybe there's a bot learning to do your job this minute.

Automate this Christopher Steiner, 2012 *The Formula* Luke Dormehl, 2014-04-03 What if everything in life could be reduced to a simple formula? What if numbers were able to tell us which partners we were best matched with, not just in terms of attractiveness but for a long term committed marriage? Or if they could say which films would be the biggest hits at the box office and what changes could be made to those films to make them even more successful? Or even who out of us is likely to commit certain crimes and when? This may sound like the world of science fiction but in fact it is just the tip of the iceberg in a world that is increasingly ruled by complex algorithms and neural networks. In *The Formula* Luke Dormehl takes you inside the world of numbers, asking how we came to believe in the all-conquering power of algorithms, introducing the mathematicians, artificial intelligence experts and Silicon Valley entrepreneurs who are shaping this brave new world and ultimately asking how we survive in an era where numbers can sometimes seem to create as many problems as they solve.

The Executive's How-To Guide to Automation George E. Danner, 2018-12-17 From driverless cars to pilotless planes, many functions that have previously required human labor can now be performed using artificial intelligence. For businesses, this use of AI results in reduced labor costs and even more important, creating a competitive advantage. How does one look at any

organization and begin the work of automating it in sensible ways This book provides the blueprint for automating critical business functions of all kinds It outlines the skills and technologies that must be brought to bear on replicating human like thinking and judgment in the form of algorithms Many believe that algorithm design is the exclusive purview of computer scientists and experienced programmers This book aims to dispel that notion An algorithm is merely a set of rules and anyone with the ability to envision how different components of a business can interact with other components already has the ability to work in algorithms Though many fear that the use of automation in business means human labor will no longer be needed the author argues that organizations will re purpose humans into different roles under the banner of automation not simply get rid of them He also identifies parts of business that are best targeted for automation This book will arm business people with the tools needed to automate companies making them perform better move faster operate cheaper and provide great lasting value to investors
