Automorphic Forms and L-Functions for the Group GL(n,R) Dorian Goldfeld, 2006-08-03 L functions associated to automorphic forms encode all classical number theoretic information They are akin to elementary particles in physics This book provides an entirely self contained introduction to the theory of L functions in a style accessible to graduate students with a basic knowledge of classical analysis complex variable theory and algebra Also within the volume are many new results not yet found in the literature The exposition provides complete detailed proofs of results in an easy to read format using many examples and without the need to know and remember many complex definitions The main themes of the book are first worked out for GL 2 R and GL 3 R and then for the general case of GL n R In an appendix to the book a set of Mathematica functions is presented designed to allow the reader to explore the theory from a computational point of view

Explicit Constructions of Automorphic L-Functions Stephen Gelbart, Ilya Piatetski-Shapiro, Stephen Rallis, 2006-11-15 The goal of this research monograph is to derive the analytic continuation and functional equation of the L functions attached by R P Langlands to automorphic representations of reductive algebraic groups The first part of the book by Piatetski-Shapiro and Rallis deals with L functions for the simple classical groups the second part by Gelbart and Piatetski-Shapiro deals with non simple groups of the form $G/\mathrm{GL}(n)$ with G a quasi split reductive group of split rank n The method of proof is to construct certain explicit zeta integrals of Rankin-Selberg type which interpolate the relevant Langlands L functions and can be analyzed via the theory of Eisenstein series and intertwining operators This is the first time such an approach has been applied to such general classes of groups The flavor of the local theory is decidedly representation theoretic and the work should be of interest to researchers in group representation theory as well as number theory

Motives Uwe Jannsen, Jean-pierre Serre, Steven Kleiman, 1994-02-28. Motives were introduced in the mid 1960s by Grothendieck to explain the analogies among the various cohomology theories for algebraic varieties, to play the role of the missing rational cohomology and to provide a blueprint for proving Weil's conjectures about the zeta function of a variety over a finite field. Over the last ten years or so, researchers in various areas: Hodge theory, algebraic K-theory, polylogarithms, automorphic forms, L-functions, ℓ -adic representations, trigonometric sums, and algebraic cycles, have discovered that an enlarged and in part conjectural theory of mixed motives indicates and explains phenomena appearing in each area. Thus the theory holds the potential of enriching and unifying these areas. These two volumes contain the revised texts of nearly all the lectures presented at the AMS-IMS-SIAM Joint Summer Research Conference on Motives held in Seattle in 1991. A number of related works are also included, making for a total of forty-seven papers, from general introductions to specialized surveys to research papers.

Analytic Properties of Automorphic L-Functions Stephen Gelbart, Freydoon Shahidi, 2014-07-14. *Analytic Properties of Automorphic L-Functions* is a three-chapter text that covers considerable research works on the automorphic L-functions attached by Langlands to reductive algebraic groups. Chapter I focuses on the analysis of Jacquet-Langlands methods and the Einstein series and Langlands's so-called Euler products. This chapter explains how local and global zeta integrals are used to prove the analytic continuation and functional equations of the automorphic L-functions attached to $GL(2)$. Chapter II deals with the developments and refinements of the zeta integrals for $GL(n)$. Chapter III describes the results for the L-functions $L(s, \rho)$ which are considered in the constant terms of the Einstein series for some quasisplit reductive group. This book will be of value to undergraduate and graduate mathematics students.

Drinfeld Moduli Schemes and Automorphic Forms Yuval Z. Flicker, 2013-01-04. *Drinfeld Moduli Schemes and Automorphic Forms: The Theory of Elliptic Modules with Applications* is based on the author's original work establishing the correspondence between ℓ -adic rank r Galois representations and automorphic representations of $GL(r)$ over a function field in the local case and in the global case under a restriction at a single place. It develops Drinfeld's theory of elliptic modules, their moduli schemes, and covering schemes, the simple trace formula, the fixed point formula, as well as the congruence relations and a simple converse theorem, not yet published anywhere. This version, based on a recent course taught by the author at The Ohio State University, is updated with references to research that has extended and developed the original work. The use of the theory of elliptic

modules in the present work makes it accessible to graduate students and it will serve as a valuable resource to facilitate an entrance to this fascinating area of mathematics
