Automotive High Speed Communication Technologies Kirsten Matheus, Michael Kaindl, 2022 The demands for processing power, software and communication are continuously increasing in all industries and also in the automotive one. In vehicles, the need for higher data rates is driven by more electronic functions in general but especially by ever more potent camera sensors, displays and high performance ECUs. This book provides a holistic view on new SerDes and Ethernet high speed communication solutions for cars. It addresses core physical components such as cables, connectors or PCB design as well as physical layer processing, use case specific protocols and the use cases as such. It is important to the authors not only to explain the technologies but also to provide context and background in respect to various technical choices. The intent is to help readers understand the current ecosystem end to end, whether they are new to the automotive industry or experts who want to deepen their understanding on specific items, whether they are working for a car manufacturer directly or any of the suppliers, whether they are already involved or evaluating to get involved. **Vehicular Networking** Marc
