post genomic era Although some 500 000 600 000 natural products have been isolated and characterized over the past two centuries there may be a 10 fold greater inventory awaiting immediate exploration based on biosynthetic gene cluster predictions The approach of this book is to codify the chemical logic that underlies each natural product structural class as they are assembled from building blocks of primary metabolism This second edition integrates many new findings into the sets of principles of the first edition that parsed categories of natural product chemistries into the underlying enzymatic mechanisms and the catalytic machinery for building the varied and complex end product metabolites New chapters include evaluation of a core set of thermodynamically activated but kinetically stable metabolites that power both primary and secondary metabolic pathways Also after decades of uncertainty about the existence of various pericyclase classes a series of genome mining heterologous expression and enzymatic activity characterization have validated a plethora of pericyclases over the past decade The several types of pericyclases are involved in biosynthetic complexity generation of almost every major category of natural products This text will serve as a reference point for chemists of every subdiscipline including synthetic organic chemists and medicinal chemists It will also be valuable to bioinformatic and computational biologists pharmacognocists and chemical ecologists and bioengineers and synthetic biologists Comprehensive Natural Products Chemistry: DNA and aspects of molecular biology Derek H. R. Barton, Kōji Nakanishi, Otto Meth-Cohn, 1999 Hardbound This volume is intended to cover the chemistry of one of the most widely studied and important natural products DNA Discussed in detail are physicochemical properties of the molecule itself as well as small molecule natural products that are known to interact with it Also included are methods to synthesize and manipulate DNA and modified analogues Twenty chapters are devoted to this overall topic The first five relate to the structure of DNA the first focuses on thermodynamics and kinetics of double helix formation the next two describe triple and tetra helical structures formed by DNA and the last two focus on methods for probing DNA structure specifically NMR methods and chemical probing methods respectively Chapters 6 12 focus on the chemistry of natural DNA and modified analogues The first of these addresses nonenzymatic methods for synthesizing DNA and the next chapter on methods for attachment of reporter groups t Advanced Practical Chemistry Jagdamba Singh, 2009 *International Books in Print*, 1995 Barbara Hopkinson, [Anonymus AC01401231], 1995
