of this new book is to provide a single efficient and effective source for college and university students to understand
research development and learn then apply statistical concepts while developing a Research Proposal or Research Study
using the American Psychological Association APA format It is a specialist text particularly well suited for introductory
accelerated and short courses that emphasize quantitative approaches within research activities After teaching over 30 years
the authors know that several different texts commonly must be bought or used in learning to develop a research proposal or
research study Additionally many colleges and universities have combined various research and statistical courses into one
course or program Students therefore have to learn what research is and its many concepts learn various descriptive and
inferential statistics and apply APA format for completed reports during one school term Instructors as well as students
easily appreciate that a detailed grasp of the above three components during a single university course would be a daunting
task Hence the authors offer this practical integration and application of all three components into a single recommended
text as an efficient effective bridge to learning these complex areas Mind Maps are used to help readers organize the many
detailed concepts and techniques herein These Mind Maps are presented with the central concept at or near the middle of
the diagram and subordinate concepts and techniques arranged as branches clockwise from the upper right around to the
upper left For Instructors adopting this text an Instructor Guide chapter PowerPoint R files and Test bank will be provided to
