And illustrated with solved examples enough elementary material that could be covered in the first level course is included. For example, methods for solving linear and nonlinear algebraic equations, interpolation, differentiation, integration, and simple techniques for integrating ODEs and PDEs. Ordinary and partial differential equations, advanced techniques, and concepts that could form part of a second level course. Includes the Runge-Kutta method for solving ODEs, IVPs, initial value problems, stiffness of ODEs, IVPs, multiplicity of solutions, convergence, characteristics, the orthogonal collocation method for solving ODEs, BVPs, boundary value problems, and finite element techniques. An extensive set of graded problems, often with hints, has been included. Some involve simple applications of the concepts and can be solved using a calculator, while several are from real life situations and require writing computer programs or use of library subroutines. Practice on these is expected to build up the reader's confidence in developing large computer codes.
