

CONCEPT: FUNCTIONAL GROUPS

• Functional groups: groups of atoms that are reactive/ functional & commonly found together.

□ Typically extend off of the carbon backbone of a molecule.

□ _____ functional groups are common in biology:

1 _____ Group  A central yellow carbon atom is bonded to four white hydrogen atoms. One bond is vertical, one is horizontal, and two are diagonal. A wavy line extends from the left carbon bond.	2 _____ Group  A wavy line extends from the left, ending at a yellow rectangular box.	3 _____ Group  A central green carbon atom is bonded to a yellow nitrogen atom above, a yellow hydrogen atom below, and two wavy lines extending horizontally to the left and right.	4 _____ Group  A central green carbon atom is double-bonded to a white oxygen atom above and right, single-bonded to a yellow hydrogen atom below and right, and single-bonded to a wavy line extending to the left.
5 _____ Group  A central yellow nitrogen atom is bonded to two white hydrogen atoms (one diagonal up-right, one diagonal down-right) and a wavy line extending to the left.	6 _____ Group  A central yellow carbon atom is bonded to a white oxygen atom above, a white hydroxyl group (OH) to the right, a white hydroxyl group (OH) below, and a white oxygen atom to the left. The left oxygen is part of a ring structure with a wavy line extending from it.	7 _____ Group  A yellow rectangular box with a wavy line extending from the left.

Activating Agents and Protecting Groups Anthony J. Pearson, William R. Roush, 1999-07-09 Recognising the need for a cost effective reference work that deals not only with the most popular reagents in synthesis but also reaches the widest possible audience of practising organic chemists the editors of The Encyclopedia of Reagents for Organic Synthesis EROS have developed a list of the most important and useful reagents employed in the field conveniently presented in four separate volumes The reagents included in this volume reflect the fact that protecting groups and activation procedures are often used in combination There are many instances in the synthesis of natural and unnatural products pharmaceuticals oligosaccharides and oligonucleotides etc where similar tactics must be employed to prevent undesired activation or reaction of functionality Accordingly the most important reagents used to protect amines alcohols carboxyl carbonyl and other reactive functional groups are included in this volume The list of activating agents includes well known reagents that activate functional groups for substitution or elimination reactions as well as less traditional examples e g HMPA used to activate enolates and alkylolithium reagents to increase the nucleophilicity Each article contains all of the information found in EROS as well as expanded related reagents listings and additional references to enable the reader to quickly access a broad range of information that is beyond the scope of the reagent entries themselves This text will prove an invaluable resource
