Wierzchon,2005-05-24 This edited book contains articles accepted for presentation during the conference Intelligent Information Systems 2005 IIS 2005 New Trends in Intelligent Information Processing and Web Mining held in Gdansk Poland on June 13 16 2005 Special attention is devoted to the newest developments in the areas of Artificial Immune Systems Search engines Computational Linguistics and Knowledge Discovery The focus of this book is also on new computing paradigms including biologically motivated methods quantum computing DNA computing advanced data analysis new machine learning paradigms reasoning technologies natural language processing and new optimization techniques [Logical and Relational Learning](#) Luc De Raedt,2008-09-27

The term logical and relational learning refers to the subfield of artificial intelligence machine learning and data mining that is concerned with learning in expressive logical or relational representations. It is the union of inductive logic programming, statistical relational learning, and multi-relational data mining, which all have contributed techniques for learning from data in relational form. Even though some early contributions to logical and relational learning are about forty years old, now it was only with the advent of inductive logic programming in the early 1990s that the field became popular. Whereas initial work was often concerned with logical or logic programming issues, the focus has rapidly changed to the discovery of new and interpretable knowledge from structured data, often in the form of rules, and soon important successes in applications in domains such as bio and cheminformatics and computational linguistics were realized. Today the challenges and opportunities of dealing with structured data and knowledge have been taken up by the artificial intelligence community at large and form the motivation for a lot of ongoing research. Indeed, graph network and multi-relational data mining are now popular themes in data mining, and statistical relational learning is receiving a lot of attention in the machine learning and uncertainty in artificial intelligence communities. In addition, the range of tasks for which logical and relational techniques have been developed now covers almost all machine learning and data mining tasks.

Learning to Surf Marko Balabanovic, Stanford University, Computer Science Department, 1998 Two research issues motivate this work and distinguish it from approaches usually taken by information retrieval or machine learning researchers.
