Investment Analysis & Portfolio Management Frank K. Reilly, Keith C. Brown, Brindha Gunasingham, Asjeet Lamba, Dr Frank Elston, 2019-11-19 This first Asia Pacific edition of Reilly Brown's Investment Analysis and Portfolio Management builds on the authors' strong reputations for combining solid theory with practical application and has been developed especially for courses across the Australia New Zealand and Asia Pacific regions. The real world illustrations and hands-on activities enhance an already rigorous empirical approach to topics such as investment instruments, capital markets, behavioural finance, hedge funds, and international investment. The text also emphasises how investment practice and theory are influenced by globalisation

The Economics of Environmental Risk V. K. Smith, 2022-12-13 Featuring real world examples of how risk information affects public choices, The Economics of Environmental Risk expertly demonstrates that policymakers need to consider how people learn about those risks. Offering insights into examples such as hazardous waste, radon, smoking, hurricanes, and terrorist threats over the past four decades, this intuitive book illustrates environmental risks and the choices made to mitigate the potential effects

Analytical Theory of Democracy Andranik Tangian, 2020-03-30 This book operationalizes the idea of political representation, which is fundamental to modern democracies. Both individual representatives and representative bodies are evaluated using the indices of popularity (the average percentage of the population whose opinion is represented) on topical policy issues and universality (the percentage of issues for which the prevailing public opinion is represented). Viewed as objective functions, these indices can aid in the search for optimal representatives and representative bodies. By replacing the consistency analysis of the social choice axioms with the calculation of the best compromises, the paradoxes of social choice such as those of Condorcet and Arrow can be overcome. These indices also form the core of an alternative election method that is aimed at enhancing policy representation, a recent concept of political representation which is not supported by the conventional voting systems shaped during the American and French Revolutions. This method is tested in a series of election experiments that focus on implementation details. In addition, non-societal applications such as MCDM, finance, or traffic control are considered where the objects that reflect the properties or behavior of other objects are regarded as their representatives. Given its scope, the book will appeal to political scientists, economists, and operations researchers as well as to politicians interested in improving democratic performance and electoral system design
