Travis Lowdermilk, Monty Hammontree, 2020-02-24 If you're striving to make products and services that your customers will love, then you'll need a customer-driven organization. As companies transform their businesses to meet the demands of the digital age, they find themselves grappling with uniquely human challenges. Organizational knowledge becomes siloed, employees move to safeguard their expertise, and customer data creates polarization and infighting between teams. All of these challenges widen the distance between the people who make your products and the customers who use them. To meet today's challenges, companies need to do more than build processes for customer-driven products. They need to create a customer-driven culture. With the help of his friend and mentor Monty Hammontree, Travis Lowdermilk takes readers through the cultural transformation of the Developer Division at Microsoft. This book shows readers how to hack their culture and reduce the distance between them and their customers' needs. It's a uniquely personal story that's told amidst a cultural revolution at one of the largest software companies in the world. This story acts as your guide. You'll learn how to: Establish a Common Language, Help employees change their thinking and actions, Build Bridges, Not Walls, Treat product building as a team sport, Encourage Learning Versus Knowing, Help your team understand their customers, Build Leaders That Build Your Culture, Showcase star employees to inspire others, Meet Teams Where They Are, Make it easy for teams to adopt vital behavior changes, Make Data Relatable, Move beyond numbers and focus on empathizing with customers. *CubeSats: Invading and Shaping the Space Industry* Paris Chrysos, Francesco P.

Society of Singularities Andreas Reckwitz,2020-04-21 Our contemporary societies place more and more

emphasis on the singular and the unique The industrial societies of the early 20th century produced standardized products cities subjects and organizations which tended to look the same but in our late modern societies we value the exceptional unique objects experiences places individuals events and communities which are beyond the ordinary and which claim a certain authenticity Industrial society's logic of the general has been replaced by late modernity's logic of the particular In this major new book Andreas Reckwitz examines the causes structures and consequences of the society of singularities in which we now live The transformation from industrial to cultural capitalism the rise of digital technologies and their culture machine and the emergence of an educated urban new middle class form a powerful engine for the singularization of the social In late modernity what is singular is valorized and stirs the emotions while what is general has to remain in the background and this has profound social consequences The society of singularities systematically produces devaluation and inequality winner takes all markets job polarization the neglect of rural regions and the alienation of the traditional middle class The emergence of populism and the rise of aggressive forms of nationalism which emphasize the cultural authenticity of one's own people thus turn out to be the other side of singularization This prize winning book offers a new perspective on how modern societies have changed in recent decades and it will be of great value to anyone interested in the forces that are shaping our world today

Designing visualization and interaction for industrial control rooms of the future Veronika Domova, 2020-05-15 During the last decades the industry has been undergoing extensive digitization leading to complex ensembles of humans machines autonomous agents and sensors With this new setup comes the challenge of how to appropriately support work practices of industrial operators who now need to monitor and control complex industrial processes through remote interfaces Information overflow and restrictive interfaces are two significant problems that operators face in their daily routines In this PhD I explore approaches to visualization and interaction that would reduce industrial operators information load and enable them to perform their duties in an efficient reliable and safe manner Industrial users and industrial settings are the starting points of my research In this thesis I describe multiple examples of custom tailored data visualizations that reduce the operator s visual load by consolidating large amounts of data into compact overview displays with often nontrivial data presentation With respect to interaction I propose several tangible and tactile interfaces as well as concepts for natural interaction that let the user freely interact with the control station and the information it depicts Finally I propose several concepts of adaptive systems that adjust to the operator s context to ensure their high situational awareness and convenience of interaction Even though this thesis is primarily intended for the community of interaction designers I expect it to be of interest to a broader audience due to its relation to the user experience field To a certain extent everyone can resonate with the user s problems because in our everyday life we all are users of some technology and services Furthermore for a lay reader this work can be seen as a comprehensive introduction to how the industry works and what role the human plays there Under de senaste årtiondena har industrin digitaliserats i stor utsträckning och består nu av komplexa strukturer där människor maskiner autonoma agenter och

The Invention of Creativity Andreas Reckwitz, 2018-01-25 Contemporary society has seen an unprecedented rise in both the demand and the desire to be creative to bring something new into the world Once the reserve of artistic subcultures creativity has now become a universal model for culture and an imperative in many parts of society In this new book cultural sociologist Andreas Reckwitz investigates how the ideal of creativity has grown into a major social force from the art of the avant garde and postmodernism to the creative industries and the innovation economy the psychology of creativity and self growth the media representation of creative stars and the urban design of creative cities Where creativity is often assumed to be a force for good Reckwitz looks critically at how this imperative has developed from the 1970s to the present day Though we may well perceive creativity as the realization of some natural and innate potential within us it has rather to be understood within the structures of a very specific culture of the new in late modern society The Invention of Creativity is a bold and refreshing counter to conventional wisdom that shows how our age is defined by radical and restrictive processes of social aestheticization It will be of great interest to those working in a variety of disciplines from cultural and social theory to art history and aesthetics

The Church after Innovation (Ministry in a Secular Age Book #5) Andrew Root, 2022-09-20 Churches and their leaders have innovation fever Innovation seems exciting a way to enliven tired institutions embrace creativity and be proactive and is a superstar of the business world But this focus on innovation may be caused by an obsession with contemporary relevance creativity and entrepreneurship that inflates the self lacks theological depth and promises burnout In this follow up to Churches and the Crisis of Decline leading practical theologian Andrew Root delves into the problems of innovation He explores where innovation and entrepreneurship came from shows how they break into church circles and counters the new imaginations like neoliberalism and technology that

hold the church captive to modernity Root reveals the moral visions of the self that innovation and entrepreneurship deliver they are dependent on workers and consumers being obsessed with their selves which leads to significant faith formation issues This focus on innovation also causes us to think we need to be singularly unique instead of made alive in Christ Root offers a return to mysticism and the poetry of Meister Eckhart as a healthier spiritual alternative **Leading Public Sector**

Koskinen,2023-09-12 A new empathic approach to design research drawn from the informed experiences of a leading design research program in Finland Design Empathy Interpretation tells the story of empathic design a design research program at Aalto University in Helsinki Finland that has developed an interpretive approach to design over the past twenty years As one of the leaders of the Helsinki group Ilpo Koskinen draws on his own experiences to offer readers a general intellectual and professional history of design research and argues for what he calls an interpretive approach Design Empathy Interpretation shows how the group has created connections all across the globe and how a seemingly soft approach to design research can be useful in both industry and government Koskinen follows design research s transformation from questions of usability in the 1980s through to the revolution in personal electronics and the user centered turn of the 1990s Using the research community in Helsinki as a case study and moving between specific projects and theoretical debates he offers readers a focused introduction to the major methodological and intellectual challenges as well as the opportunities of design research

He argues that all design tasks however simple or complex begin with understanding the way humans ascribe meaning both as individuals and as actors in complex societies Thus all design research must be interpretive at its core A new empathic approach to design research drawn from the informed experiences of a leading design research program in Finland
