Design Patterns for e-Science Henry Gardner, Gabriele Manduchi, 2007-05-03 This is a book about a code and about coding. The code is a case study which has been used to teach courses in e-Science at the Australian National University since 2001. Students learn advanced programming skills and techniques in the Java language. Above all, they learn to apply useful object oriented design patterns as they progressively refactor and enhance the software. We think our case study EScope is as close to real life as you can get. It is a smaller version of a networked graphical waveform browser which is used in the control rooms of fusion energy experiments around the world. It is quintessential e-Science in

the sense of e Science being computer science and information technology in the service of science It is not speci cally Grid enabled but we develop it in a way that will facilitate its deployment onto the Grid The standard version ofEScope interfaces with a specialised database for waveforms and related data known asMDSplus On the acc panying CD we have provided you with software which will enable you to installMDSplus EScope and sample data les onto Windows or Linux c puters There is much additional software including many versions of the case study as it gets built up and progressively refactored using design patterns There will be a home web site for this book which will contain up to date information about the software and other aspects of the case study

Towards the Representation of Design Patterns as Design Components Yaping Jing, 2005 Design patterns encapsulate accumulated software design knowledge and implementation experience While they exist in general as informal guidelines that describe reusable design solutions to recurring problems in software development they are not available as code abstractions and thus not ready to be incorporated into a concrete system implementation In order to propagate the design patterns reusability from design phase to implementation phase this work presents an approach that differentiates between code reusable and non code reusable design patterns Using this classification we develop a method that allows for representing code reusable design patterns as reusable design components These design components when applied to application specific design participants via well defined protocols and or interfaces output concrete pattern specific code ready to be incorporated into concrete system implementations Through experimentation on GoF's design pattern catalog we have identified 12 design patterns that can be classified as code reusable and promoted them to reusable design components These design components although implemented in Java exhibit very similar properties as shown in Hannemann and Kiczales AspectJ implementation of design patterns in terms of reusability and pluggability
