Determination of Surface PKa Values of Surface-confined Molecules Derivatized with PH-sensitive Pendant Groups M. A. Bryant, 1992      Determination of Surface PKa Values of Surface-Confined Molecules Derivatized with PH-Sensitive Pendant Groups , 1992 Two methods for in situ electrochemical measurements of surface pKa values are reported. The methods are applied to surface confined monolayers consisting of organomercaptan molecules derivatized with pH sensitive pendant groups. The first technique relies upon pH dependent electrostatic binding of redox probe molecules to the charged monolayer surface; the surface concentration of the probe molecules reflects the degree of surface protonation. The second method relates the differential capacitance of the monolayer modified electrode surface to the surface pKa. The two methods yield essentially identical results and are consistent with a recently developed theoretical model. The surface pKa values of 4-mercaptopyridine and 4-aminothiophenol are 3.7 and 5.7 respectively      **Immobilized Biocatalysts** Peter Grunwald, 2018-11-14 This book is a printed edition of the Special Issue Immobilized Biocatalysts that was published in *Catalysts*      **Scientific and Technical Aerospace Reports** , 1992      Nanoscale Materials Luis M. Liz-Marzán, Prashant V. Kamat, 2007-05-08 Organized nanoassemblies of inorganic nanoparticles and organic molecules are building blocks of nanodevices whether they are designed to perform molecular level computing, sense the environment or improve the catalytic properties of a material.
