Signal and Image Processing for Remote Sensing C.H.

Chen,2006-10-09 Most data from satellites are in image form thus most books in the remote sensing field deal exclusively with image processing However signal processing can contribute significantly in extracting information from the remotely sensed waveforms or time series data Pioneering the combination of the two processes Signal and Image Processing for Remote Sensing provides a balance between the role of signal processing and image processing in remote sensing Featuring contributions from worldwide experts this book emphasizes mathematical approaches Divided into two parts Part I examines signal processing for remote sensing and Part II explores image processing Not limited to the problems with data from satellite sensors the book considers other sensors which acquire data remotely including signals and images from infrasound seismic microwave and satellite sensors It covers a broader scope of issues in remote sensing information processing than other books in this area With rapid technological advances the mathematical techniques provided will far outlast the sensor software and hardware technologies Focusing on methodologies of signal processing and image processing in remote sensing this book discusses unique techniques for dealing with remote sensing problems
