Wyglinski, 2013 For a senior level undergraduate course on digital communications this unique resource provides you with a practical approach to quickly learning the software defined radio concepts you need to know for your work in the field Software-Defined Radio for Engineers Alexander M. Wyglinski, Robin Getz, Travis Collins, Di Pu, 2018-04-30 Based on the popular Artech House classic Digital Communication Systems Engineering with Software Defined Radio this book provides a practical approach to quickly learning the software defined radio SDR concepts needed for work in the field This up to date volume guides readers on how to quickly prototype wireless designs using SDR for real world testing and experimentation This book explores advanced wireless communication techniques such as OFDM LTE WLA and hardware targeting Readers will gain an understanding of the core concepts behind wireless hardware such as the radio frequency front end analog to digital and digital to analog converters as well as various processing technologies Moreover this volume includes chapters on timing estimation matched filtering frame synchronization message decoding and source coding The orthogonal frequency division multiplexing is explained and details about HDL code generation and deployment are provided The book concludes with coverage of the WLAN toolbox with OFDM beacon reception and the LTE toolbox with downlink reception Multiple case studies are provided throughout the book Both MATLAB and Simulink source code are included to assist readers with their projects in the field **Introduction to OFDM Receiver Design and Simulation** Y.J. Liu, 2019-11-30 This practical book is an accessible introduction to Orthogonal frequency division multiplexing OFDM receiver design a technology that allows digitized data to be carried by multiple carriers It offers a detailed simulation study of an OFDM algorithm for Wi Fi and 4G cellular that can be used to understand other OFDM waveforms Extensive simulation studies are included using the transmission waveform given by the IEEE 802 11 standard Scrambler error correcting codes interleaver and radio wave propagation model are included OFDM waveform characteristics signal acquisition synchronization issues channel estimation and tracking hard and soft decision decoding are all covered Detailed derivations leading to the final formula for any algorithm are given which allows the reader to clearly understand the approximations and conditions behind the formulas and apply them appropriately The algorithms are selected not just for the best performance from simulation study but also for easy implementation An example is a unique algorithm for signal acquisition using the principle of maximum likelihood detection *Implementing Full Duplexing for 5G* David B. Cruickshank, 2020-05-31 This exciting new book examines the feasibility of using a method of doubling the capacity of cellular networks by simultaneously transmitting and receiving signals at the same frequency a process known as full duplexing FD To realize full duplexing changes in the hardware of the cell base stations relaying equipment hot spot access points and mobile phones are necessary to prevent the hardware s transmitters from interfering with their own receivers This requires looking at how to separate the strong transmitted signal

from the very weak received signal a process requiring both hardware analog changes and more complex digital signal processing Different ways of achieving that goal are examined The books reviews the merits of hardware changes involving new duplexing components that may be different depending on the frequency band and cell hardware being used Developing full duplex FD systems in 5G LTE cellular communications and what can be achieved with ferrite based circulators in terms of size reduction and performance enhancement especially at millimetric frequencies is considered The relative merits of ferrite and non ferrite circulators are compared in terms of their fundamental materials and device technologies such as isolation insertion loss bandwidth and non linearity FD in the entire 5G cell is also examined and its resulting range of equipment and device communication This includes front hauling more sophisticated back and front hauling backhaul beam switching and cell extenders and relays all of which could involve FD
