Digital Image Processing Using MATLAB Rafael C. Gonzalez, Richard Eugene Woods, Steven L. Eddins, 2004

Digital Image Processing Rafael C. Gonzalez, Richard Eugene Woods, 2008 A comprehensive digital image processing book that reflects new trends in this field such as document image compression and data compression standards The book includes a complete rewrite of image data compression a new chapter on image analysis and a new section on image morphology [Digital Image Processing and Analysis](#) Scott E Umbaugh, 2010-11-19 Whether for computer evaluation of otherworldly terrain or the latest high definition 3D blockbuster digital image processing involves the acquisition analysis and processing of visual information by computer and requires a unique skill set that has yet to be defined a single text Until now Taking an applications oriented engineering approach Digital Image Processing and Analysis provides the tools for developing and advancing computer and human vision applications and brings image processing and analysis together into a unified framework Providing information and background in a logical as needed fashion the author presents topics as they become necessary for understanding the practical imaging model under study He offers a conceptual presentation of the

material for a solid understanding of complex topics and discusses the theory and foundations of digital image processing and the algorithm development needed to advance the field. With liberal use of color throughout and more materials on the processing of color images than the previous edition, this book provides supplementary exercises, a new chapter on applications, and two major new tools that allow for batch processing, the analysis of imaging algorithms, and the overall research and development of imaging applications. It includes two new software tools: the Computer Vision and Image Processing Algorithm Test and Analysis Tool (CVIP ATAT) and the CVIP Feature Extraction and Pattern Classification Tool (CVIP FEPC). Divided into five major sections, this book provides the concepts and models required to analyze digital images and develop computer vision and human consumption applications, as well as all the necessary information to use the CVIP tools environment for algorithm development, making it an ideal reference tool for this fast-growing field.

Digital Image Processing Uvais Qidwai, C.H. Chen, 2009-10-15. Avoiding heavy mathematics and lengthy programming details, *Digital Image Processing: An Algorithmic Approach with MATLAB* presents an easy methodology for learning the fundamentals of image processing. The book applies the algorithms using MATLAB without bogging down students with syntactical and debugging issues. One chapter can typically be completed per week, with each chapter divided into three sections. The first section presents theoretical topics in a very simple and basic style with generic language and mathematics. The second section explains the theoretical concepts using flowcharts to streamline the concepts and to form a foundation for students to code in any programming language. The final section supplies MATLAB codes for reproducing the figures presented in the chapter. Programming-based exercises at the end of each chapter facilitate the learning of underlying concepts through practice. This textbook equips undergraduate students in computer engineering and science with an essential understanding of digital image processing. It will also help them comprehend more advanced topics and sophisticated mathematical material in later courses. A color insert is included in the text, while various instructor resources are available on the author's website.
