multimedia databases The single chapters of this textbook explain the general architecture of multimedia information retrieval systems and cover various metadata languages such as Dublin Core RDF or MPEG The authors emphasize high level features and show how these are used in mathematical models to support the retrieval process For each chapter there is detail on further reading and additional exercises and teaching material is available online

Digital Image Processing

Bernd Jähne, 2013-06-29 Digital image processing is a fascinating subject in several aspects Human beings perceive most of the information about their environment through their visual sense While for a long time images could only be captured by photography we are now at the edge of another technological revolution which allows image data to be captured manipulated and evaluated electronically with computers With breathtaking pace computers are becoming more powerful and at the same time less expensive so that widespread applications for digital image processing emerge In this way image processing is becoming a tremendous tool to analyze image data in all areas of natural science For more and more scientists digital image processing will be the key to study complex scientific problems they could not have dreamed to tackle only a few years ago A door is opening for new interdisciplinary cooperations merging computer science with the corresponding research areas Many students engineers and researchers in all natural sciences are faced with the problem of needing to know more about digital image processing This book is written to meet this need The author himself educated in physics describes digital image processing as a new tool for scientific research The book starts with the essentials of image processing and leads in selected areas to the state of the art This approach gives an insight as to how image processing really works

Remote Sensing Digital Image Analysis John A. Richards, 2012-09-09 Remote Sensing Digital Image Analysis provides the non specialist with a treatment of the quantitative analysis of satellite and aircraft derived remotely sensed data Since the first edition of the book there have been significant developments in the algorithms used for the processing and analysis of remote sensing imagery nevertheless many of the fundamentals have substantially remained the same This new edition presents material that has retained value since those early days along with new techniques that can be incorporated into an operational framework for the analysis of remote sensing data The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image processing in remote sensing The presentation level is for the mathematical non specialist Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background Each chapter covers a different aspect of the analysis of digital remotely sensed data without an excessively detailed mathematical treatment of computer based algorithms but in a manner conducive to an understanding of their capabilities and limitations Problems conclude each chapter

Digital Image Compression Techniques Majid Rabbani, Paul W. Jones, 1991 In order to utilize digital images effectively specific techniques are needed to reduce the number of bits required for their representation This Tutorial Text provides the

groundwork for understanding these image compression techniques and presents a number of different schemes that have proven useful. The algorithms discussed in this book are concerned mainly with the compression of still frame continuous tone monochrome and color images but some of the techniques such as arithmetic coding have found widespread use in the compression of bilevel images. Both lossless bit preserving and lossy techniques are considered. A detailed description of the compression algorithm proposed as the world standard, the JPEG baseline algorithm, is provided. The book contains approximately 30 pages of reconstructed and error images illustrating the effect of each compression technique on a consistent image set, thus allowing for a direct comparison of bit rates and reconstructed image quality. For each algorithm, issues such as quality vs bit rate, implementation complexity, and susceptibility to channel errors are considered.
