Disaster Management By Harsh K Gupta :

Disaster Management Harsh K. Gupta, 2003 This Book Contains Seven Chapters Each Dealing With One Major Natural Disaster Encountered In Our Country Each Of The Authors Is An Expert In That Particular Field The Outstanding Contribution Of This Book Is That It Not Only Deals With The Forecasting And Description Of The Various Natural Disasters But Also Stresses The Management Aspect Exhaustively Detailing The Necessary Steps That Need To Be Taken To Deal With The Fallout In The Wake Of These Disasters The Book Also Describes The Advances In Remote Sensing And The State Of The Art Technology Available In India For The Monitoring And Prediction Of These Phenomena It Also Draws Up A Comprehensive Warning System To Be Implemented In Order To Minimize The Extensive Losses To Life And Property That Occur Year After Year

Harsh K. Gupta Harsh K. Gupta, 2024-08-19 This book captures the essence of one of the most remarkable journeys of a professional who prevailed over numerous challenges and adverse situations that appeared before him from nowhere and how he emerged victorious to be hailed at a global forum of the American Geophysical Union in 2008 The author reflects upon the circumstances and times in post independent India that threw him out of the comforts of a well to do family into the real world He traces back his entry into the field of earthquake science and dwells at length upon the scope and freedom it offered for innovative thinking in the field with limitless opportunities Mishaps and accidents paved the way to remarkable discoveries and achievements including the creation of the world record for establishing and populating India's first permanent base station in Antarctica in a record time of one Antarctic summer despite having a near fatal helicopter crash on 4th day after reaching Antarctica Stressing the need to live safely with earthquakes as their short term prediction is not a possibility yet the author advocates a two prong strategy of directly looking into the earthquake source region deep inside the earth and developing an earthquake resilient society simultaneously He cites the success story of the Indian Tsunami Early Warning System that is operational in the Indian Ocean today The book inspires young professionals with a flair for challenges and a burning desire to achieve results at any cost This book provides important information in a nutshell about artificial water reservoir triggered earthquakes India's building of the Dakshin Gangotri all weather station in Antarctica Indian Ocean Tsunami warning set up Low Temperature Thermal Desalination etc The main objective of the book is to inspire a generation of young minds through a narration of scientific achievements that did not come easily to him The aim is to tell them the difference between a reaction and a response to a given situation the former being impulsive and irrational and the latter responsible and rational

Three Great Tsunamis: Lisbon (1755), Sumatra-Andaman (2004) and Japan (2011) Harsh K. Gupta, Vineet K. Gahalaut, 2014-07-08 Tsunamis are primarily caused by earthquakes Under favourable geological conditions when a large earthquake occurs below the sea bed and the resultant rupture causes a vertical displacement of the ocean bed the entire column of water above it is displaced causing a tsunami In the ocean tsunamis do not reach great heights but can travel at velocities of up to 1000 km hour As a tsunami reaches shallow sea depths there is a

decrease in its velocity and an increase in its height Tsunamis are known to have reached heights of several tens of meters and inundate several kilometres inland from the shore Tsunamis can also be caused by displacement of substantial amounts of water by landslides volcanic eruptions glacier calving and rarely by meteorite impacts and nuclear tests in the ocean In this SpringerBrief the causes of tsunamis their intensity and magnitude scales global distribution and a list of major tsunamis are provided The three great tsunamis of 1755 2004 and 2011 are presented in detail The 1755 tsunami caused by the Lisbon earthquake now estimated to range from Mw 8.5 to 9.0 was the most damaging tsunami ever in the Atlantic ocean It claimed an estimated 100 000 human lives and caused wide spread damage The 2004 Sumatra Andaman Mw 9.1 earthquake and the resultant tsunami were the deadliest ever to hit the globe claiming over 230 000 human lives and causing wide spread financial losses in several south and south east Asian countries The 2011 Mw 9.0 Tohoku Oki earthquake and the resultant tsunami were a surprise to the seismologists in Japan and around the globe The height of the tsunami far exceeded the estimated heights It claimed about 20 000 human lives The tsunami also caused nuclear accidents This earthquake has given rise to a global debate on how to estimate the maximum size of an earthquake in a given region and the safety of nuclear power plants in coastal regions This Brief also includes a description of key components of tsunami warning centres progress in deploying tsunami watch and warning facilities globally tsunami advisories and their communication and the way forward

Defence and Strategic Studies Mr. Rohit Manglik, 2022-04-22 In this book we will study about national security military strategy defense policies and geopolitical issues Extreme Natural Hazards, Disaster Risks and Societal Implications Alik Ismail-Zadeh, Jaime Urrutia Fucugauchi, Andrzej Kijko, Kuniyoshi Takeuchi, Ilya Zaliapin, 2014-04-17 This book presents a unique interdisciplinary approach to disaster risk research combining cutting edge natural science and social science methodologies Bringing together leading scientists policy makers and practitioners from around the world it presents the risks of global hazards such as volcanoes seismic events landslides hurricanes precipitation floods and space weather and provides real world hazard case studies from Latin America the Caribbean Africa the Middle East Asia and the Pacific region Avoiding complex mathematics the authors provide insight into topics such as the vulnerability of society disaster risk reduction policy relations between disaster policy and climate change adaptation to hazards and re insurance approaches to extreme events This is a key resource for academic researchers and graduate students in a wide range of disciplines linked to hazard and risk studies including geophysics volcanology hydrology atmospheric science geomorphology oceanography and remote sensing and for professionals and policy makers working in disaster prevention and mitigation
