Patient Care Information Systems Erica L. Drazen, Jane B. Metzger, Jami L. Ritter, Mark K. Schneider, 2012-12-06. In the current era of health care reform, the pressures to truly manage patient care and to build effective integrated delivery systems are generating intense interest in patient care information systems. Health care institutions cannot provide seamless access to care without seamless access to information and they cannot manage and improve care without improved information management. Patient Care Information Systems examines how to design and implement these systems so they successfully meet the needs of physicians, nurses and other health care providers. In one convenient reference, the authors summarize and synthesize previously disparate research and case experiences on these systems and suggest future directions based on the evolving demands of administrators and caregivers. **13th**
