Latest Trends in Engineering and Technology Sajjan Singh, Sarabpreet Kaur, 2024-06-28 We are very pleased to introduce the proceedings of the International Conference on Latest Trends in Engineering and Technology ICLTET 2023. Papers were well presented in the conference in the fields of Artificial Intelligence, Machine Learning, IOT, Communication Networks, Mechanical Engineering, Civil Engineering, Nano Material Research, Business Management, and many more to arouse a high level of interest. The presented papers maintained the high promise suggested by the written abstracts and the program was chaired in a professional and efficient way by the session chair who were selected for their expertise in the subject. The number of delegates was also highly gratifying, showing the high level of interest in the subject. This Proceeding provides the permanent record of what was presented. They indicate the state of development at the time of writing of all aspects of this important topic and will be invaluable to all academicians and researchers in the field for that reason. Finally, it is appropriate that we record our thanks to our fellow members of the Technical Organizing Committee for encouraging participation from those areas. We are also indebted to those who served as session chair and reviewers without their support the conference could not have been the success that it was. We also acknowledge the authors themselves without whose expert input there would have been no conference. Their efforts made a great contribution to its success.

Design of Operational Transconductance Amplifier Rohit M. Thanki, Hardik R. Sanghani, Prof. R. K. Lamba, 2011-07 Operational Transconductance Amplifier (OTA) is one of the most versatile and important circuit components in the analog and mixed signal circuit design. OTA is a voltage control current source device. In this book, we show simple designing of schematic circuit and CMOS Layout of OTA and get parameters like gain margin, phase margin, slew rate, CMRR, Transient Time, Noise Spectral Density, PSRR, Power Dissipation, and Power Consumption.

Analog Integrated Circuit Design Automation Ricardo Martins, Nuno Lourenço, Nuno Horta, 2016-07-20 This book introduces readers to a variety of tools for analog layout design automation. After discussing the placement and routing problem in electronic design automation (EDA), the authors overview a variety of automatic layout generation tools as well as the most recent advances in analog layout-aware circuit sizing. The discussion includes different methods for automatic placement: a template-based Placer and an optimization-based Placer, a fully automatic Router, and an empirical-based Parasitic Extractor. The concepts and algorithms of all the modules are thoroughly described, enabling readers to reproduce the methodologies, improve the quality of their designs, or use them as a starting point for a new tool. All the methods described are applied to practical examples for a 130nm design process as well as placement and routing benchmark sets.

Textbook of Operational Transconductance Amplifier and Analog Integrated Circuits Tahira Parveen,2013-12-30 This book covers a detailed study of Operational Transconductance Amplifier OTA based circuits their realizations and applications The book is primarily concerned with the building blocks and their applications in linear and nonlinear circuit design presented in a simplified and methodical way The book comprises nine chapters covers important building blocks ideal and non ideal component simulators Design of Operational Transconductance Amplifiers (OTA) and Their Application in Low-pass Filters in SOI CMOS Sabyasachi Mallick,2003 *Recycling Folded Cascode Operational*

Transconductance Amplifier Sanjeev Sharma, 2014-07-22 In this work the low power Gain Boosted Recycling Folded Cascode Operational Transconductance Amplifier GB RFC OTA is designed and analyzed using 130nm CMOS technology The design of the circuit is made schematically using design entry tool Tanner Schematic Editor S Edit is used for design entry The generated net list is simulated using T Spice For functional verification of the OTA circuits DC AC transient analysis have been carried out The proposed design is based on Recycling Folded Cascode topology The recycling folded cascode OTA increases the effective transconductance of FC OTA which further enhance the other performance parameters such as Gain GBW and speed of amplifier within same area and power budget The additional cascode Gain stage is used to increase the gain of the design by enhancing its output impedance The different compensation techniques are discussed and Single Miller Capacitor Nulling Resistor is used as compensation circuitry in order to achieve the significant Phase Margin The small compensation capacitor C_c of 3pf is used which also improves the slew rate The proposed design operates on 1V Power supply and consumes a power of 700uW

Operational Transconductance Amplifiers for Gigahertz Applications You Zheng, 2008 A novel CMOS operational transconductance amplifier OTA is proposed and demonstrated in this thesis Due to its feedforward regulated cascode topology it breaks the previous OTA frequency limit of several hundred MHz and operates at frequencies up to 10 GHz with a large transconductance This is confirmed by an in depth high frequency analysis simulations and experimental demonstrations using purpose built circuits Experimental results also show that the proposed OTA has high linearity and low intermodulation distortion which is of particular interest in microwave circuits The OTA's noise behavior and the effects of process variations device mismatch and power supply noise on the transconductance are also studied To the best of our knowledge the noise analysis here is the first of its kind on regulated cascode circuits which can be applied to other regulated cascodes with minor changes Three microwave applications of this OTA are explored in this thesis 1 an active bandpass filter with a wide tuning range 2 a 2.4 GHz ISM band variable phase shifter and 3 a microwave active quasi circulator which are all in CMOS MMIC form These three circuits can be easily integrated with other chip components for System on Chip SoC realizations The use of the OTA makes these three applications super compact the active filter is at least 5 times smaller than previous circuits with a similar topology and the phase shifter and quasi circulator are at least 3 times smaller than previous works in that frequency range Furthermore the tunability of the developed OTA on its transconductance gives its applications extra freedom in tuning their frequencies and gains losses electronically In the first application the active bandpass filter has a novel narrowband filtering topology and has a wide tuning range of 28% around 1.8 GHz which makes it very suited for reconfigurable multi band wireless systems In the second and third applications the active variable phase shifter has a comparable variable phase shift range of 120 in the 2.4 GHz ISM band and the active quasi circulator has transmissions close to 0 dB and directivities over 24 dB from 1.5 GHz to 2.7 GHz

A 90 DB, 85 MHz Operational Transconductance Amplifier (OTA) Using Gain Boosting Technique Ashish Vora,2005 Gain and speed are the two most important parameters of an amplifier Optimizing an amplifier for both of these parameters leads to contradicting demands Various architectures have been reported to obtain high gain from the circuits Cascode circuits are widely used in circuit design at places where high gain and high output impedances are required Different architectures like triple cascode topology dynamic biasing and a positive feedback amplifier have been used to obtain high gains These architectures have been compared in this thesis along with drawbacks and advantages of each
