Design Sketching :

Sketching User Experiences: Getting the Design Right and the Right Design Bill Buxton, 2010-07-28 Sketching User Experiences approaches design and design thinking as something distinct that needs to be better understood by both designers and the people with whom they need to work in order to achieve success with new products and systems So while the focus is on design the approach is holistic Hence the book speaks to designers usability specialists the HCI community product managers and business executives There is an emphasis on balancing the back end concern with usability and engineering excellence getting the design right with an up front investment in sketching and ideation getting the right design Overall the objective is to build the notion of informed design molding emerging technology into a form that serves our society and reflects its values Grounded in both practice and scientific research Bill Buxton's engaging work aims to spark the imagination while encouraging the use of new techniques breathing new life into user experience design Covers sketching and early prototyping design methods suitable for dynamic product capabilities cell phones that communicate with each other and other embedded systems smart appliances and things you only imagine in your dreams Thorough coverage of the design sketching method which helps easily build experience prototypes without the effort of engineering prototypes which are difficult to abandon Reaches out to a range of designers including user interface designers industrial designers software engineers usability engineers product managers and others Full of case studies examples exercises and projects and access to video clips that demonstrate the principles and methods

Interactive Sketch-based Interfaces and Modelling for Design Alexandra Bonnici, Kenneth P. Camilleri, 2023-05-31 Sketching is a natural and intuitive communication tool used for expressing concepts and ideas that are difficult to communicate through text or speech alone In design applications drawings are used at various stages of the design process from the early concept drawings scribbled on a piece of paper to immersive interactions in which users manipulate and adjust the 3D form of an object in virtual or augmented reality environments This variety in drawing activities brings about the need for different interpretation strategies that support not only the sketching activity itself but also allow sketch based interactions such as sketch based queries to take place In this book we explore the different drawing approaches used in design and the algorithms required for processing and interpreting the different sketches and drawings in design The book is divided into two parts The first part focuses on sketching in the 2D domain This includes the digitization of offline and paperbased sketches techniques for online sketch recognition observations of user drawing habits algorithms for inferring depth from 2D drawings as well as non photorealistic rendering techniques that are then applied to sketch based queries The second part of the book focuses on 3D sketching in virtual or augmented reality spaces Here we present the processing and rendering of the 3D strokes the different interaction devices available for 3D sketching and look at different applications where immersive 3D sketching has been applied with success

Five Design-Sheets: Creative Design and Sketching for Computing and Visualisation Jonathan C. Roberts, Christopher J.

Headleand, Panagiotis D. Ritsos, 2017-05-28 This book describes a structured sketching methodology to help you create alternative design ideas and sketch them on paper The Five Design Sheet method acts as a check list of tasks to help you think through the problem create new ideas and to reflect upon the suitability of each idea To complement the FdS method we present practical sketching techniques discuss problem solving consider professional and ethical issues of designing interfaces and work through many examples Five Design Sheets Creative Design and Sketching for Computing and Visualization is useful for designers of computer interfaces or researchers needing to explore alternative solutions in any field It is written for anyone who is studying on a computing course and needs to design a computing interface or create a well structured design chapter for their dissertation for example We do acknowledge that throughout this book we focus on the creation of interactive software tools and use the case study of building data visualization tools We have however tried to keep the techniques general enough such that it is beneficial for a wide range of people with different challenges and different situations and for different applications

Computer Supported Cooperative Work in Design IV Weiming Shen, Jianming Yong, Yun Yang, Jean-Paul A. Barthès, Junzhou Luo, 2008-12-18 Design of complex artifacts and systems requires the cooperation of multidisciplinary design teams using multiple sophisticated commercial and non commercial engineering tools such as CAD tools modeling simulation and optimization software engineering databases and knowledge based systems Individuals or individual groups of multidisciplinary design teams usually work in parallel and independently with various engineering tools which are located on different sites often for quite a long period of time At any moment individual members may be working on different versions of a design or viewing the design from various perspectives at different levels of details In order to meet these requirements it is necessary to have efficient computer supported collaborative design systems These systems should not only automate individual tasks in the manner of traditional computer aided engineering tools but also enable individual members to share information collaborate and coordinate their activities within the context of a design project Based on close international collaboration between the University of Technology of Compiègne in France and the Institute of Computing Technology of the Chinese Academy of Sciences in the early 1990s a series of international workshops on CSCW in Design started in 1996 In order to facilitate the organization of these workshops an International Working Group on CSCW in Design CSCWD was established and an International Steering Committee was formed in 1998 The series was converted to international conferences in 2000 building on the success of the four previous workshops
