Determination of a Solubility Product Constant

Purpose: To prepare and investigate solutions of Pb^{2+} and I^- , determining solubility concentrations, and then determine corresponding values. Calculate also solubility product constant of PbI_2 at different temperatures.

Safety: Lead compounds are toxic. Handle accordingly. Precaution

Procedure:

Q. When is a solution said to be saturated?

A solution is saturated when the rate of dissolving is equal to the rate of crystallization, meaning that no more solute will be dissolved.

Q. What constants are used for representing the solubility of a substance in a K_{sp} expression?

The coefficient of each product in balanced equation divided by that number (e.g. K_{sp} expression)

Q. What happens when the solubility [] of ions substituted into a K_{sp} expression equals the actual K_{sp} ?

A means that solution is then just saturated or that the fully saturated soln was still not out of the solution and crystallizing solute.
