Dictionary of Architecture and Building, English-German Uli Gelbrich, 1989-01-01 The chief aim of this dictionary is to provide the user with a thorough coverage of the everyday terms used in the field of architecture and construction The whole field including associated fields is covered in about 30 000 entries this simplifies use of the dictionary and avoids too many references The dictionary contains almost all the radical words and principal parts together with the most important compound words and terms encountered in professional texts specifications contracts projects drawings and scientific papers as well as words heard every day on the site The compound words listed are mainly those where the separate translations of each part of the word would not produce precisely the same meaning in the other language If a compound is not listed the reader can safely translate it by breaking it up into its component parts and looking these up individually An appendix contains important abbreviations and contractions used mainly on drawings The dictionary has followed international practices in construction and has been constantly brought up to date using a variety of contemporary sources On publication the dictionary will represent the result of ten years of work by the author The following specialities are covered architecture structural engineering underground and foundation

engineering soil mechanics roads and bridges engineering hydraulic engineering and structures timber engineering carpentry and joinery sanitary engineering and plumbing heating and air conditioning acoustical engineering and illumination engineering environmental engineering coating work preservation of structures and waterproofing surveying special mathematical terms strength theory and statics building material and testing construction equipment and tools and construction contracts and economics
