A Dictionary of Geography, Second Edition F. J. Monkhouse, 2008 The geographer seeks to describe the diverse features of the earth's surface to explain if possible how these features have come to be what they are and to discuss how they influence the distribution of man with his diverse activities Geography therefore stands transitionally yet centrally between the natural sciences the social studies and the humanities While in its concept and content it is an integrated whole

of necessity it impinges on the associated disciplines and inevitably makes use of a wide range of kindred terminology In compiling the 3 400 entries for this dictionary the main criterion for inclusion has been usage Geographical textbooks and periodicals have been systematically combed and where a term has been used in a specific geographical context or in a specialist sense which differs from general practice or popular usage it has been included Foreign words are listed where they have been accepted into English geographical literature especially where no satisfactory translation exists Cross references are freely given printed in small capitals where it is necessary to assist the user in tracing cognate and supplementary entries or where the meaning of the word thus shown is essential to the understanding of the entry The emphasis throughout is on specific factual information conveniently accessible on a strict alphabetical basis rather than a bare definition Statistical material and formulae are appended where it would seem helpful in the form of tables under the relevant entries Since this dictionary is neither a gazetteer nor a compendium of current affairs lists of countries and capitals regional names and international groupings are not included since these can be found conveniently elsewhere The five hundred and seventy two additional entries to this dictionary together with a few minor modifications to the existing material are the result of extensive correspondence and discussion since the appearance of the first edition This edition originally published in 1970 has continuing relevance as a resource for professionals F J Monkhouse was formerly chair of geography at the University of Southampton Throughout his career he was also visiting professor at the University of Illinois University of Maryland Queen s University and the Miami University Ohio His books include *The Countries of North Western Europe and The Lake District* [A Dictionary of Human Geography](#) Alisdair Rogers,Noel Castree,Rob Kitchin,2013-04-26 *A Dictionary of Human Geography* is a brand new addition to Oxford s Paperback Reference Series offering over 2 000 clear and concise entries on human geography terms From basic terms and concepts to biographical entries acronyms organisations and major periods and schools in the history of human geography it provides up to date accurate and accessible information It also includes entry level web links that are listed and regularly updated on a dedicated companion website This dictionary is a reliable reference for students of human geography and ancillary subjects for researchers and professionals in the field and for interested generalists

Dictionary of Geography , The Dictionary of Physical Geography David S. G. Thomas,Andrew S. Goudie,2009-07-17 The third edition of this comprehensive encyclopedic dictionary covers the whole field of physical geography and provides an essential reference for all students and lecturers in this field [A Dictionary of Geography](#) F. J. Monkhouse,1965 *Elsevier's Dictionary of Geography* Vladimir Mikhaïlovich Kotliakov,Anna Igorevna Komarova,2007 Geography is a system of highly developed sciences about the environment Geographical science embracing the study of the Earth s physical phenomena people and their economic activities has always been in need of an extensive terminology Geographical terms are related to the terms of natural sciences physics chemistry biology geology etc and humanities history economics sociology etc since geography is based on these fundamental subjects

Geography includes a number of disciplines and subdivisions which appeared along with the development of the science. In spite of being very different geographical disciplines, they have some common tools of investigation which are maps, comparative method of exploration, remote sensing, geoinformation systems. Today, very well developed terminologies of all the specialist fields of geography and related subjects exist in the main world languages. However, they are not always well correlated. Nowadays, geographical terminology requires unification and international correlation more than ever before. Hence, the idea of compiling a multilingual polydisciplinary dictionary. The Dictionary consists of the basic table of terms arranged according to the order of the English alphabet with each term numbered. Each entry consists of the term in English and its equivalents in Russian, French, German, Spanish. Short definitions of terms are given in English and in Russian. The terms are supplied with the necessary grammar labels such as gender of nouns, plural number, etc. The Dictionary combines two functions: that of a defining dictionary and that of a bilingual dictionary. These two functions are basically contradictory because usually the defining dictionary is aimed at giving one meaning of the word which is the main and essential one, while the bilingual dictionary tries to give different equivalents of a given word in the other language in order to supply the user with maximum possible translations differing in the shades of meanings, thus giving him the possibility to choose the appropriate word. But in our Dictionary, we intentionally decided to combine the two functions: defining and multilingual, because a short definition of the term and equivalents in other languages help to achieve our main aim, which consists in showing the basic geographical terminology and harmonizing it in several languages. Having this in consideration, we deliberately mixed two types of dictionaries in one. Organized alphabetically via English, it provides short definitions of geographical terms in English and Russian. It includes multilingual translation of terms from English to Russian, French, German, Spanish.
