Evaluation of Materials C.H. Chen, 2012-12-06 The NATO Advanced Research Workshop on Signal Processing and Pattern Recognition in Nondestructive Evaluation NOE of Materials was held August 19 22 1987 at the Manoir St Castin Lac Beauport Quebec Canada Modern signal processing pattern recognition and artificial intelligence have been playing an increasingly important role in improving nondestructive evaluation and testing techniques The cross fertilization of the two major areas can lead to major advances in NOE as well as presenting a new research area in signal processing With this in mind the Workshop provided a good review of progress and comparison of potential techniques as well as constructive discussions and suggestions for effective use of modern signal processing to improve flaw detection classification and prediction as well as material characterization This Proceedings volume includes most presentations given at the Workshop

This publication like the meeting itself is unique in the sense that it provides extensive interactions among the interrelated areas of NOE. The book starts with research advances on inverse problems and then covers different aspects of digital waveform processing in NOE and eddy current signal analysis. These are followed by four papers of pattern recognition and AI in NOE and five papers of image processing and reconstruction in NOE. The last two papers deal with parameter estimation problems. Though the list of papers is not extensive as the field of NOE signal processing is very new, the book has an excellent collection of both tutorial and research papers in this exciting new field.

Digital Signal Processing and Spectral Analysis for Scientists Silvia Maria Alessio, 2015-12-09. This book covers the basics of processing and spectral analysis of monovariate discrete time signals. The approach is practical, the aim being to acquaint the reader with the indications for and drawbacks of the various methods and to highlight possible misuses. The book is rich in original ideas visualized in new and illuminating ways and is structured so that parts can be skipped without loss of continuity. Many examples are included based on synthetic data and real measurements from the fields of physics, biology, medicine, macroeconomics etc. and a complete set of MATLAB exercises requiring no previous experience of programming is provided. Prior advanced mathematical skills are not needed in order to understand the contents; a good command of basic mathematical analysis is sufficient. Where more advanced mathematical tools are necessary, they are included in an Appendix and presented in an easy to follow way. With this book, digital signal processing leaves the domain of engineering to address the needs of scientists and scholars in traditionally less quantitative disciplines now facing increasing amounts of data.
