Digital Image Processing Textbook By Technical Publications:

Digital Image Processing and Analysis Scott E Umbaugh, 2023-01-18 Computer Vision and Image Analysis focuses on techniques and methods for image analysis and their use in the development of computer vision applications. The field is advancing at an ever increasing pace with applications ranging from medical diagnostics to space exploration. The diversity of applications is one of the driving forces that make it such an exciting field to be involved in for the 21st century. This book presents a unique engineering approach to the practice of computer vision and image analysis which starts by presenting a global model to help gain an understanding of the overall process followed by a breakdown and explanation of each individual topic. Topics are presented as they become necessary for understanding the practical imaging model under study which provides the reader with the motivation to learn about and use the tools and methods being explored. The book includes chapters on image systems and software image analysis edge line and shape detection image segmentation feature extraction and pattern classification. Numerous examples including over 500 color images are used to illustrate the concepts discussed. Readers can explore their own application development with any programming languages including C, C++, MATLAB, Python and R and software is provided for both the Windows C++ and MATLAB environments. The book can be used by the academic community in teaching and research with over 700 PowerPoint Slides and a complete Solutions Manual to the over 150 included problems. It can also be used for self study by those involved with developing computer vision applications whether they are engineers, scientists or artists. The new edition has been extensively updated and includes numerous problems and programming exercises that will help the reader and student to develop their skills.

Digital Image Processing and Analysis CHANDA, BHABATOSH, MAJUMDER, DWIJESH DUTTA, 2011-10-30 The second edition of this extensively revised and updated text is a result of the positive feedback and constructive suggestions received from academics and students alike. It discusses the fundamentals as well as the advances in digital image processing and analysis both theory and practice to fulfil the needs of students pursuing courses in Computer Science and Engineering CSE and Electronics and Communication Engineering ECE both at undergraduate and postgraduate levels. It is also considered useful for teachers, professional engineers and researchers. The second edition has three objectives. First, each and every chapter has been modified in the light of recent advances as well as emerging concepts. Second, a good deal of colour image processing has been incorporated. A large number of line drawings and images have been included to make the book student friendly. Third, some new problems have been added in almost all chapters to test the student's understanding of the real life problems. The other distinguishing features of the book are: A summary at the end of the chapter to help the student capture the key points. About 320 line drawings and 280 photographs for easy assimilation of the concepts. Chapter end problems for extensive practice and research.
