Zukas, 1990-11-08 This compendium of mathematical techniques for the modeling and simulation of high velocity impacts presents the various analytical and experimental aspects of impact dynamics and describes the responses of a variety of materials and structures under impact Coverage is extended beyond that of the author s Impact Dynamics and deals with new topics in impacts involving inert materials including the dynamic response to energetic and inert materials Treatment uses classical mechanics along with the conservation laws combined with failure analysis The International Journal of Mechanical Engineering Education ,1992 *Shock Compression of Condensed Matter--1991* S. C. Schmidt, 1992 The papers collected together in this volume constitute a review of recent research on the response of condensed matter to dynamic high pressures and temperatures Included are sections on equations of state phase transitions material properties explosive behavior measurement techniques and optical and laser

studies Recent developments in this area such as studies of impact and penetration phenomenology the development of materials especially ceramics and molecular dynamics and Monte Carlo simulations are also covered These latest advances in addition to the many other results and topics covered by the authors serve to make this volume the most authoritative source for the shock wave physics community Conventional Warhead Systems Physics and Engineering Design Richard M. Lloyd, 1998 This is the first book written that discusses the physics of designing warheads against ballistic missiles In his exploration of the mathematical equations and logic behind antiballistic missiles ATBMs warhead design Lloyd takes an in depth look at warhead design and endgame concepts against ATBMs Hailed as the perfect companion to Tactical Missile Warheads the book demonstrates the system aspects you will need as a systems warhead engineer designing complex tactical and defense warheads under tight budgetary constraints Conventional Warhead Systems Physics and Engineering Design features a previously unpublished investigation of energy momentum and methods for estimating damage on very complex ballistic missile payloads such as submunitions of chemical and biological nature Direct hit warhead design and fragmentation are comprehensively discussed for the first time in print High strain rate explosives thermodynamics heat transfer chemistry penetration mechanics statistics dynamics and finite element equations are also covered extensively in this single compact volume The book contains over 2000 mathematical equations with more than 500 figures that give today's warhead engineers new ideas and knowledge in warhead design MATLAB is a registered trademark of The MathWorks Inc
