Markov Decision Processes in Artificial Intelligence Olivier Sigaud, Olivier Buffet, 2013-03-04 Markov Decision Processes MDPs are a mathematical framework for modeling sequential decision problems under uncertainty as well as reinforcement learning problems Written by experts in the field this book provides a global view of current research using MDPs in artificial intelligence It starts with an introductory presentation of the fundamental aspects of MDPs planning in MDPs reinforcement learning partially observable MDPs Markov games and the use of non classical criteria It then presents more advanced research trends in the field and gives some concrete examples using illustrative real life applications

An Application Science for Multi-Agent Systems Thomas A. Wagner, 2006-04-11 An Application Science For Multi Agent Systems addresses the complexity of choosing which multi agent control technologies are appropriate for a given problem domain or a given application Without such knowledge when faced with a new application domain agent developers must rely on past experience and intuition to determine whether a multi agent system is the right approach and if so how to structure the agents how to decompose the problem and how to coordinate the activities of the agents and so forth This unique collection of contributions written by leading international researchers in the agent community provides valuable insight into the issues of deciding which technique to apply and when

it is appropriate to use them The contributions also discuss potential trade offs or caveats involved with each decision An Application Science For Multi Agent Systems is an excellent reference for anyone involved in developing multi agent systems

Reputation in Artificial Societies Rosaria Conte,Mario Paolucci,2012-12-06 Reputation In Artificial Societies discusses the role of reputation in the achievement of social order The book proposes that reputation is an agent property that results from transmission of beliefs about how the agents are evaluated with regard to a socially desirable conduct This desirable conduct represents one or another of the solutions to the problem of social order and may consist of cooperation or altruism reciprocity or norm obedience Reputation In Artificial Societies distinguishes between image direct evaluation of others and reputation propagating meta belief indirectly acquired and investigates their effects with regard to both natural and electronic societies The interplay between image and reputation the processes leading to them and the set of decisions that agents make on their basis are demonstrated with supporting data from agent based simulations

Methodologies and Software Engineering for Agent Systems Federico Bergenti,Marie-Pierre Gleizes,Franco Zambonelli,2006-04-28 As information technologies become increasingly distributed and accessible to larger number of people and as commercial and government organizations are challenged to scale their applications and services to larger market shares while reducing costs there is demand for software methodologies and applications to provide the following features Richer application end to end functionality Reduction of human involvement in the design and deployment of the software Flexibility of software behaviour and Reuse and composition of existing software applications and systems in novel or adaptive ways When designing new distributed software systems the above broad requirements and their translation into implementations are typically addressed by partial complementarities and overlapping technologies and this situation gives rise to significant software engineering challenges Some of the challenges that may arise are determining the components that the distributed applications should contain organizing the application components and determining the assumptions that one needs to make in order to implement distributed scalable and flexible applications etc

Agent Autonomy Henry Hexmoor,Cristiano Castelfranchi,Rino Falcone,2012-12-06 Autonomy is a characterizing notion of agents and intuitively it is rather unambiguous The quality of autonomy is recognized when it is perceived or experienced yet it is difficult to limit autonomy in a definition The desire to build agents that exhibit a satisfactory quality of autonomy includes agents that have a long life are highly independent can harmonize their goals and actions with humans and other agents and are generally socially adept Agent Autonomy is a collection of papers from leading international researchers that approximate human intuition dispel false attributions and point the way to scholarly thinking about autonomy A wide array of issues about sharing control and initiative between humans and machines as well as issues about peer level agent interaction are addressed

Agent Intelligence Through Data Mining Andreas L. Symeonidis,Pericles A. Mitkas,2006-05-06 Knowledge hidden in voluminous data repositories routinely created and maintained by today's applications can be extracted by data mining The next step is

to transform this discovered knowledge into the inference mechanisms or simply the behavior of agents and multi agent systems Agent Intelligence Through Data Mining addresses this issue as well as the arguable challenge of generating intelligence from data while transferring it to a separate possibly autonomous software entity This book contains a methodology tools and techniques and several examples of agent based applications developed with this approach This volume focuses mainly on the use of data mining for smarter more efficient agents Agent Intelligence Through Data Mining is designed for a professional audience of researchers and practitioners in industry This book is also suitable for graduate level students in computer science

Agent Supported Cooperative Work Yiming Ye,E. Churchill,2012-12-06 Improvements in computer networking have heralded great expectations for computer mediated distributed work However experience has revealed that as information flow improves a central problem for distributed workers is the administration management and control of that information Research into Computer Supported Cooperative Work CSCW investigates design methods and technologies for the support of collaboration communication and coordination of distributed group work both within and among organizations In tandem with this focus on the support of distributed communication and collaboration there have been exciting developments in the fields of Intelligent Agents and Distributed Artificial Intelligence DAI notably in the concepts theories and deployment of intelligent agents as a means of distributing computer based problem solving expertise The paradigm of multi agent systems forms a proposed basis for the design of CSCW architectures the support of CSCW operations and for addressing some of the problems of cooperative working The application of a multi agent approach to CSCW makes information exchange among the participants easier by delivering support to the participants assisting workflows and procedures and providing convenient user interfaces to CSCW systems Furthermore the ideas inherent in such an approach are also applicable to other domains such as support for interactive learning Organizations that seek to exploit the advantages offered through CSCW will benefit from the integration of agents in the management and use of their corporate knowledge especially with the advancement of wired or wireless networking pervasive computing and other information technologies Agent Supported Cooperative Work describes the state of the art in this exciting new area covering both theoretical foundations and practical applications of ASCW It is the first book explicitly dedicated to ASCW

problem solving and complex system modeling The final chapter outlines possibilities for future research and development Numerous illustrative examples experimental case studies and exercises at the end of each chapter of Autonomy Oriented Computing help particularize and consolidate the methodologies and theories presented Partition Function Form Games László Á. Kóczy, 2018-04-13 This book presents a systematic overview on partition function form games a game form in cooperative game theory to integrate externalities for various applications Cooperative game theory has been immensely useful to study a wide range of issues but the standard approaches ignore the side effects of cooperation Recently interest shifted to problems where externalities play the main roles such as models of cooperation in market competition or the shared use of public resources Such problems require richer models that can explicitly evaluate the side effects of cooperation In partition function form games the value of cooperation depends on the outsiders actions A recent surge of interest driven by applications has made results very fragmented This book offers an accessible yet comprehensive and systematic study of properties solutions and applications of partition function games surveying both theoretical results and their applications It assembles a survey of existing research and smaller original results as well as original interpretations and comparisons The book is self contained and accessible for readers with little or no knowledge of cooperative game theory
