Advances in Heat Transfer

James P. Hartnett, Thomas F. Irvine, Young I. Cho, George A. Greene, 2001-04-24 Heat transfer is the exchange of heat energy between a system and its surrounding environment which results from a temperature difference and takes place by means of a process of thermal conduction mechanical convection or electromagnetic radiation Advances in Heat Transfer is designed to fill the information gap between regularly scheduled journals and university level textbooks by providing in depth review articles over a broader scope than is allowable in either journals or texts

Radiometric Temperature Measurements

, 2009-10-01 This book describes the theory of radiation thermometry both at a primary level and for a variety of applications such as in the materials processing industries and remote sensing This book is written for those who will apply radiation thermometry in industrial practice use radiation thermometers for scientific research the radiation thermometry specialist in a national measurement institute developers of radiation thermometers who are working to innovate products for instrument manufacturers and developers of non contact thermometry methods to address challenging thermometry problems The authors of each chapter were chosen from a group of international scientists who are experts in the field and specialists on the subject matter covered in the chapter A large number of references are included at the end of each chapter as a resource for those seeking a deeper or more detailed understanding This book is more than a practice guide readers will gain in depth knowledge in 1 the proper selection of the type of thermometer 2 the best practice in using the radiation thermometers 3 awareness of the error sources and subsequent appropriate procedure to reduce the overall uncertainty and 4 understanding of the calibration chain and its current limitations Covers all fundamental aspects of the radiometric measurements

Discusses practical applications with details on the instrumentation calibration and error sources Authors are from leading national labs working in R D of temperature measurements
