consideration is not sufficient to predict those effects The typical predictive phenomenological models are complex and only available for very special failures A quantitative prediction on how failure will change depending on the content and orientation of the fibres is generally not possible and the direct involvement of the above effects in a numerical simulation requires multi scale modelling One the one hand this makes it possible to take into account the properties of the matrix material and the fibre material the microstructure of the composite in terms of fibre content fibre orientation and shape as well as the properties of the interface between fibres and matrix On the other hand the multi scale approach links these local properties to the global behaviour and forms the basis for the dimensioning and design of engineering components Furthermore multi scale numerical simulations are required to allow efficient solution of the models when investigating three dimensional problems of dimensioning engineering parts Bringing together mathematical modelling materials mechanics numerical methods and experimental engineering this book provides a unique overview of multi scale modelling approaches multi scale simulations and experimental investigations of short fibre reinforced thermoplastics The first chapters focus on two principal subjects the mathematical and mechanical models governing composite properties and damage description The subsequent chapters present numerical algorithms based on the Finite Element Method and the Boundary Element Method both of which make explicit use of the composite s microstructure Further the results of the numerical simulations are shown and compared to experimental results Lastly the book investigates deformation and failure of composite materials experimentally explaining the applied methods and presenting the results for different volume fractions of fibres This book is a valuable resource for applied mathematics theoretical and experimental mechanical engineers as well as engineers in industry dealing with modelling and simulation of short fibre reinforced composites
