Reliability - Safe Societies in a Changing World Stein Haugen,Anne Barros,Coen van Gulijk,Trond Kongsvik,Jan Erik Vinnem,2018-06-15 Safety and Reliability Safe Societies in a Changing World collects the papers presented at the 28th European Safety and Reliability Conference ESREL 2018 in Trondheim Norway June 17 21 2018 The contributions cover a

wide range of methodologies and application areas for safety and reliability that contribute to safe societies in a changing world. These methodologies and applications include foundations of risk and reliability assessment and management, mathematical methods in reliability and safety, risk assessment, risk management, system reliability, uncertainty analysis, digitalization and big data, prognostics and system health management, occupational safety, accident and incident modeling, maintenance modeling and applications, simulation for safety and reliability analysis, dynamic risk and barrier management, organizational factors and safety culture, human factors and human reliability, resilience engineering, structural reliability, natural hazards, security, economic analysis in risk management. Safety and Reliability Safe Societies in a Changing World will be invaluable to academics and professionals working in a wide range of industrial and governmental sectors: offshore oil and gas, nuclear engineering, aeronautics and aerospace, marine transport and engineering, railways, road transport, automotive engineering, civil engineering, critical infrastructures, electrical and electronic engineering, energy production and distribution, environmental engineering, information technology and telecommunications, insurance and finance, manufacturing, marine transport, mechanical engineering, security and protection and policy making. *IJPHM Special Issue on Wind Turbine PHM (Color)* PHM Society, 2013-09-17. IJPHM Special issue on Wind Turbine PHM is the first special issue that discusses the state of the art in PHM of wind turbine systems. This Special Issue contains 14 excellent papers that highlight a wide range of current research and application topics related to wind turbine PHM. Fault diagnostics is an important aspect of wind turbine PHM. Eight papers included in this special issue deal with fault diagnostics of different parts of a wind turbine. Each of these papers presents different fault diagnostic techniques and sensing technologies. **Mechanical Engineering**, 2008.

Vibration Control Engineering Ernesto Novillo, 2021-12-09. This book applies vibration engineering to turbomachinery covering installation, maintenance and operation. With a practical approach based on clear theoretical principles and formulas, the book is an essential how-to guide for all professional engineers dealing with vibration issues within turbomachinery. Vibration problems in turbines, large fans, blowers and other rotating machines are common issues within turbomachinery. Applicable to industries such as oil and gas, mining, cement, pharmaceutical and naval engineering, the ability to predict vibration based on frequency spectrum patterns is essential for many professional engineers. In this book, the theory behind vibration is clearly detailed, providing an easy-to-follow methodology through which to calculate vibration propagation. Describing lateral and torsional vibration and how this impacts turbine shaft integrity, the book uses mechanics of materials theory and formulas alongside the matrix method to provide clear solutions to vibration problems. Additionally, it describes how to carry out a risk assessment of vibration fatigue. Other topics covered include vibration control techniques, the design of passive and active absorbers and rigid, non-rigid and Z foundations. The book will be of interest to professionals working with turbomachinery, naval engineering, corps and those working on ISO standards 10816 and 13374. It will also aid mechanical engineering students working on vibration and machine design. **Fundamentals of Rotating Machinery**.
