Diversity and Evolutionary Biology of Tropical Flowers Peter K. Endress, 1994 *Flowering Plants · Dicotyledons* Joachim W. Kadereit, 2004-04-13 In this volume 24 flowering plant families comprising a total of 911 genera are treated They represent the asterid order Lamiales except for Acanthaceae including Avicenniaceae which will be included in a later volume Although most of the constituent families of the order have been recognized as being closely related long ago the inclusion of the families Byblidaceae Carlemanniaceae and Plocospermataceae is the result mainly of recent molecular systematic research Keys for the identification of all genera are provided and likely phylogenetic relationships are discussed extensively To facilitate the recognition of relationships families are cross referenced where necessary The wealth of information contained in this volume makes it an indispensable source for anybody in the fields of pure and applied plant sciences

Developmental Genetics of the Flower, 2006-09-29 Current major interests in this area include the study of higher level phylogenetic relationships and character evolution in the angiosperms floral evolution the genetic basis of key floral differences in basal angiosperms the genetic and genomic consequences of polyploid speciation conservation genetics of rare plant species and phylogeography *Developmental Genetics of the Flower* provides a series of papers focused on the developmental genetics of flowering as well as the genetic control of the timing of flowering Investigation of speciation mechanisms evolutionary relationships and character evolution in flowering plants and land plants utilizing a variety of experimental approaches are discussed The chapters are excellent reviews of the current fast moving area of research Provides a brief review of genes known to regulate flower development Articles emphasize the classic ABC model of flower development
