On different concepts for the linearization of matrix polynomials and canonical decompositions of structured matrices with respect to indefinite sesquilinear forms Philip Saltenberger, 2019-05-30 In this thesis a novel framework for the construction and analysis of strong linearizations for matrix polynomials is presented Strong linearizations provide the standard means to transform polynomial eigenvalue problems into equivalent generalized eigenvalue problems while preserving the complete finite and infinite eigenstructure of the problem After the transformation the QZ algorithm or special methods appropriate for structured linearizations can be applied for finding the eigenvalues efficiently The block Kronecker ansatz spaces proposed here establish an innovative and flexible approach for the construction of strong linearizations in the class of strong block minimal bases pencils Moreover they represent a new vector space setting for linearizations of matrix polynomials that additionally provides a common basis for various existing techniques on this task such as Fiedler linearizations New insights on their relations similarities and differences are revealed The generalized eigenvalue problems obtained often allow for an efficient numerical solution This is discussed with special attention to structured polynomial eigenvalue problems whose linearizations are structured as well Structured generalized eigenvalue problems may also lead to equivalent structured standard eigenvalue problems Thereby the transformation produces matrices that can often be regarded as selfadjoint or skewadjoint with respect to some indefinite inner product Based on this observation normal matrices in indefinite inner product spaces and their spectral properties are studied and analyzed Multiplicative and additive canonical decompositions respecting the matrix structure induced by the inner product are established

Linear Algebra and Its Applications David C. Lay, 2012 Linear algebra is relatively easy for students during the early stages of the course when the material is presented in a familiar concrete setting But when abstract concepts are introduced students often hit a brick wall Instructors seem to agree that certain concepts such as linear independence spanning subspace vector space and linear transformations are not easily understood and require time to assimilate Since they are fundamental to the study of linear algebra students understanding of these concepts is vital to their mastery of the subject David Lay introduces these concepts early in a familiar concrete $\mathbb{R}^n$ setting develops them gradually and returns to them again and again throughout the text so that when discussed in the abstract these concepts are more accessible Note This is the standalone book if you want the book access card order the ISBN below 0321399145 9780321399144 Linear Algebra plus MyMathLab Getting Started Kit for Linear Algebra and Its Applications Package consists of 0321385179 9780321385178 Linear Algebra and Its Applications 0321431308 9780321431301 MyMathLab MyStatLab Glue in Access Card 0321654064 9780321654069 MyMathLab Inside Star Sticker Contemporary Abstract Algebra 4th Edition Joseph A Gallian, **Differential Equations and Linear Algebra: Pearson New International Edition PDF eBook** C.
