1990s General Motors decided it needed a clean slate in its diesel designs to keep up with the Cummins and Power Stroke engines being offered by the competition To accomplish this General Motors partnered with Isuzu to create a brand new diesel engine that would be the first high pressure common rail direct injection powerplant to hit the US vehicle market The initial engine was produced at the newly built plant in Moraine Ohio on July 17 2000 Now 21 years after the joint venture DMAX Ltd was created in 1998 more than 2 million Duramax engines have been built Until the introduction of the Duramax GM s all iron indirect injected IDI 6 5L V 8 produced just 215 hp and 440 ft lbs of torque in its most powerful configuration The new aluminum headed 6 6L Duramax V 8 hit the market with 300 hp and 520 ft lbs of torque in its first configuration and it has gotten stronger with age while still meeting increasingly strict emissions requirements [The New Two-cycle Steel-type Winton Diesel Engine](#) Winton Engine Corporation,19?? **Diesel Engine Design** Herbert Frank Percy Purday,2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1919 edition Excerpt where the cylinders are secured to the crank case by a studded flange the staybolts if fitted at all may be made considerably lighter according to judgment or the results of experiment Other points to be considered in designing a crank case are 1 The provision of oil tight access doors of ample size for overhauling the bottom ends 2 End casings provided with oil flingers stuffing boxes or other means of preventing the escape of oil 3 Facings and other necessary accommodation for valve gear 4 Bosses to carry lubrication oil connections to the main bearings 5 Facings for platform brackets 6 A vent pipe or valve of large area to relieve pressure in the event of an explosion in the crank case without loss of lubricating oil during normal working 7 Steady pins to each section of the case to fix correct location Machining the Framework generally In designing all parts of an engine the designer will keep in mind the capabilities and limitations of the manufacturing plant and the operatives This is especially necessary in the case of the framework on account of the relatively large size of the parts Where the most modern type of face milling plant is available the element of size offers no difficulties and bedplates of 60 feet in length may be faced in one operation Where planing must be resorted to the capacity of the machines must be studied in the early stages of the design Machined faces should be arranged in as few different planes as possible and ribs or flanges projecting beyond those planes are to be avoided as much for convenience in machining as for the sake of appearances The simpler forms of girder or box girder construction are to be preferred to those designs in which alternate perforation by
