The Trinity of Trauma: Ignorance, Fragility, and Control Ellert Nijenhuis,2017-04-03 Enactive trauma therapy is grounded in so called enactivism which holds that like anyone else traumatized individuals are 1 embrained embodied and environmentally embedded 2 constitute biopsychological organism environment systems that are essentially interested in preserving their existence 3 are primarily affective and oriented toward making sense of things Individuals exhibit a phenomenal self world and self of the world through self and world oriented actions They do not act on the basis of knowledge but possess knowledge on the basis of world engaged sensorimotor affect laden and goal oriented actions Whenever interpersonal traumatization by significant others occurs individuals may get caught up in affective and relational conflicts they cannot resolve on their own Their generation and maintenance of a trauma related dissociation of the personality involves a kind of sense making that supports their continued existence when their capacity to integrate traumatic experiences is still too low However what starts as a courageous effort to navigate a traumatizing life may at some point in time become a serious problem Enactive trauma therapy comprises the collaboration of two organism environment systems the patient and the therapist Together they spawn new meaning and
