Dynamical Contact Problems With Friction Models Methods Experiments And Applications 2nd Edition:

Dynamical Contact Problems with Friction Walter Sextro, 2013-11-11 The aim of this book is to describe an efficient procedure to model dynamical contact problems with friction This procedure is applied to different practical problems and validated by experiments Friction contacts are used to transmit forces or to dissipate energy Examples for dynamical engineering systems with friction are brakes machine tools motors turbines bearings or wheel rail systems A better understanding of friction phenomena can result in improvements like the reduction of noise and maintenance costs increased life time of machines and improved energy efficiency Dependent on the features of the friction contact different contact models and solution methods are applied

Nonlinear Vibration with Control David Wagg, Simon Neild, 2014-11-03 This book provides a comprehensive discussion of nonlinear multi modal structural vibration problems and shows how vibration suppression can be applied to such systems by considering a sample set of relevant control techniques It covers the basic principles of nonlinear vibrations that occur in flexible and or adaptive structures with an emphasis on engineering analysis and relevant control techniques Understanding nonlinear vibrations is becoming increasingly important in a range of engineering applications particularly in the design of flexible structures such as aircraft satellites bridges and sports stadia There is an increasing trend towards lighter structures with increased slenderness often made of new composite materials and requiring some form of deployment and or active vibration control There are also applications in the areas of robotics mechatronics micro electrical mechanical systems non destructive testing and related disciplines such as structural health monitoring Two broader themes cut across these application areas i vibration suppression or active damping and ii adaptive structures and machines In this expanded 2nd edition revisions include An additional section on passive vibration control including nonlinear vibration mounts A more in depth description of semi active control including switching and continuous schemes for dampers and other semi active systems A complete reworking of normal form analysis which now includes new material on internal resonance bifurcation of backbone curves and stability analysis of forced responses Further analysis of the nonlinear dynamics of cables including internal resonance leading to whirling Additional material on the vibration of systems with impact friction The book is accessible to practitioners in the areas of application as well as students and researchers working on related topics In particular the aim is to introduce the key concepts of nonlinear vibration to readers who have an understanding of linear vibration and or linear control but no specialist knowledge in nonlinear dynamics or nonlinear control

Transient Effects in Friction Andreas Goedecke, 2014-07-08 Transient friction effects determine the behavior of a wide class of mechatronic systems Classic examples are squealing brakes stiction in robotic arms or stick slip in linear drives To properly design and understand mechatronic systems of this type good quantitative models of transient friction effects are of primary interest The theory developed in this book approaches this problem bottom up by deriving the behavior of macroscopic friction surfaces from the microscopic surface physics The model is based on two assumptions First

rough surfaces are inherently fractal exhibiting roughness on a wide range of scales Second transient friction effects are caused by creep enlargement of the real area of contact between two bodies This work demonstrates the results of extensive Finite Element analyses of the creep behavior of surface asperities and proposes a generalized multi scale area iteration for calculating the time dependent real contact between two bodies The toolset is then demonstrated both for the reproduction of a variety of experimental results on transient friction as well as for system simulations of two example systems
