

Monitoring Citrix Storage Zones

By default, Citrix ShareFile stores all user data in Citrix-managed cloud-based storage. Organizations that prefer not to store documents on the cloud, can use the ShareFile StorageZones Controller to save data on premise – i.e., within their data center.

The unavailability of an on-premise storage zone can deny users access to critical documents will adversely impact user productivity and cripple user confidence in the ShareFile technology. This is why, the availability and overall health of these storage zones have to be monitored continuously.

eG Enterprise provides a *Citrix Storage Zone* monitoring model that focuses on the health of all those critical parameters that keep a storage zone alive and accessible.

Figure 2.1: The layer model of the Citrix Storage Zone

Each layer of this model is mapped to tests that capture even the slightest of deviations in the performance of the infrastructure that supports on-premise storage zones.

The **Operating System** layer checks the CPU, memory, and I/O activity on the servers that support the storage zone and report abnormal resource usage patterns seen by these servers.

The **Network** layer checks whether network connectivity is available to the server supporting the storage zone and reports how long it takes to connect to this server. This way, the sudden unavailability of a storage zone is detected and reported.

The **TCP** layer indicates whether/not users are able to establish TCP connections to the server quickly. TCP connection drops and a high percentage of TCP retransmissions are captured and reported in the process.

The **Application Processes** and **Windows Service** layers periodically check the status of key processes/services supporting the storage zone and alert administrators if any process/service is unavailable or is not running. If users complain that a storage zone is not accessible, then the tests mapped to this layer will provide administrators with
