Clinical Psychometrics: Old Issues and New Perspectives Michela Balsamo, Marco Innamorati, Dorian A. Lamis, 2019-09-20 Clinical Psychometrics can be defined as a discipline that deals with the definition and measurement of clinical constructs Among its interests it includes dimensions such as skills behavior psychopathology quality of life and personality Indeed this discipline focuses on individual differences the theory of measurement the construction of measure instruments and their application in an international context Clinical Psychometrics can be considered as an essential tool in many fields of research related to psychological and psychiatric interventions for example it is useful for diagnostic assessment in various fields including clinical and forensic areas for the design and evaluation of specific psychological and pharmacological treatments Therefore Clinical Psychometrics is an applied discipline using psychometric tools to develop evidence based type procedures relating to the understanding and improvement of the psychological conditions of individuals This Research Topic on Clinical Psychometrics is interested in several aspects of measurement of psychological variables focusing on the two fundamental paradigmatic aspects of the discipline the Classical Test Theory and the Item Response Theory This Research Topic seeks to stimulate a scientific debate between psychotherapists and psychometricians in this area It could have applicative fallouts such as designing trans cultural studies in order to

- 1 investigate the invariance of new instruments for measuring clinical variables
- 2 test the invariance of existing instruments used in clinical research
- 3 develop more refined measure instruments for the evaluation of clinical dimensions similarly to work conducted by the Obsessive Compulsive Cognitions Working Group in identifying domains considered central to OCD and developing the 87 item Obsessive Beliefs Questionnaire
- 4 evaluate therapeutic outcomes and processes such as states stress psychological distress psychological adjustment to illness health related quality of life mood disorders sexual functioning etc

The goal of this Research Topic is to disseminate a culture of integration between psychometric model and clinical model promoting the scientific debate about the deepening of the existing methods and or the proposal of new methods capable of combining clinical significance with quantitative rigor This Research Topic welcomed all types of articles with the exception of case reports We were particularly interested in

- 1 Systematic reviews shedding new lights on the psychometric properties of the most used psychological measures in clinical psychology neuroscience psychiatry psychosomatics etc
- 2 Guidelines and suggestions on the correct use and gold standards in psychological assessment in the form of research studies and brief reports on the development of new measures and adaptation of existing ones
