Basics of CNC Programming Yadav, Om Prakash, Ram, Mangey, Negi, Pawan, 2019-04-23 Before the introduction of automatic machines and automation industrial manufacturing of machines and their parts for the key industries were made though manually operated machines Due to this manufacturers could not make complex profiles or shapes with high accuracy As a result the production rate tended to be slow production costs were very high rejection rates were high and manufacturers often could not complete tasks on time Industry was boosted by the introduction of the semi automatic manufacturing machine known as the NC machine which was introduced in the 1950 s at the Massachusetts Institute of Technology in the USA After these NC machine started to be used typical profiles and complex shapes could get produced more readily which in turn lead to an improved production rate with higher accuracy Thereafter in the 1970 s an even larger revolutionary change was introduced to manufacturing namely the use of the CNC machine Computer Numerical Control Since then CNC has become the dominant production method in most manufacturing industries including automotive aviation defence oil and gas medical electronics industry and the optical industry Basics of CNC Programming describes how to design CNC programs and what cutting parameters are required to make a good manufacturing program The authors explain about cutting parameters in CNC machines such as cutting feed depth of cut rpm cutting speed etc and they also explain the G codes and M codes which are common to CNC The skill set of CNC program writing is covered as well as how to cut material during different operations like straight turning step turning taper turning drilling chamfering radius profile profile turning etc In so doing the authors cover the level of CNC programming from basic to industrial format Drawings and CNC programs to practice on are also included for the reader

Introduction to Computer Numerical Control (CNC) James Valentino,Joseph Goldenberg,2003 One of the greatest challenges facing the United States today is in the area of manufacturing To a large extent the computer has revolutionized this technology It has virtually transformed the process of product design analysis and manufacture Industries are finding that the new manufacturing technology demands well trained personnel Education is now being viewed as a continuous and long term investment The third edition of Introduction to Computer Numerical Control CNC has been expanded and improved The blueprint reading material has been separated as follows Chapter 5 Review of Basic Blueprint Reading for CNC Programmers and Chapter 6 Review of Basic Geometric Dimensioning and Tolerancing for CNC Programmers Chapter 18 now includes a presentation on creating and simulating a complete part program using Mastercam CNC software The third edition introduces the use of CNC software for writing verifying and simulating the milling word address programs in this text To this end a new Chapter 20 titled Verifying Part Programs has been added Included with this edition is a bound CD ROM disk containing powerful industrial quality CNC verification and simulation software The software displays real time solid model animation of the machining that results from a part program Additionally it has an inspection mode that enables students to section as well as verify the dimensions of the machined part The milling part programs in the text have been edited so they will work properly with the verification and simulation software Each chapter begins with a brief listing of objectives and ends with a chapter summary Illustrations and photographs are used liberally throughout to reinforce pictorially what is being discussed Students are frequently directed to boxed in key terms and concepts Flowcharts are used to teach CNC process planning and program planning The important topic of job setup is discussed in the many solved programming examples Fundamental word address G and M code programming is stressed Industrial standard practices and terms are emphasized in the solved programming examples Needless cross referencing has been eliminated Each program is listed with all explanations appearing on the same page Pattern recognition is emphasized The student is taught to recognize a certain group of programming commands as a

programming pattern For example pattern A commands start up the CNC machine whereas pattern B commands cause a tool change to take place An excellent assortment of review exercises is provided at the end of each chapter These exercises supply the student such important information as the operation to be performed tooling tool speed tool feed and job setup data The industry standard Fanuc controller is emphasized throughout the text Important mathematical principles are reviewed before programming is presented A special chapter on right triangle trigonometry provides the student with the critical mathematical information needed to understand programming The student is exposed to the big picture of CNC shop activities A special chapter explains the most important operations to be carried out in manufacturing a part Appendixes contain information useful to the CNC student They include a list of important safety precautions summaries of G and M codes for milling and turning operations recommended speeds and feeds for different materials with respect to drilling milling and turning operations and important and easy to use machining formulas A comprehensive glossary of key CNC terms is provided at the end of the book Verification and simulation software enables students to visualize the effects of a written part program Introduction to Computer Numerical Control CNC Third Edition can be used as an entry level text for many different types of training applications These include Undergraduate one semester or two semester CNC courses Manual component of a CNC programming course Industry training course Seminar on CNC programming Adult education course Reference text for self study This textbook is designed to be used in many types of educational institutions Four year engineering schools Four year technology schools Community colleges Trade schools Industrial training centers This work is the result of several years of experience in running CNC courses for both industrial personnel and the students at Queensborough Community College We found that many existing texts were either too general or too advanced for direct application As a result we drafted supplementary notes containing step by step information The notes were enhanced and tested extensively in the classroom Several colleagues both in industry as well as in education were called upon for their input A thorough market survey also influenced the final content It should be noted that all the programs presented have been thoroughly tested The student is advised to take the appropriate safety precautions when running them on a CNC machine
