Cognitive Radio Networks Chee Wei Tan,2018 Over the past two decades there have been rapid and significant developments in the field of wireless networking especially with the emergence of wireless cognitive radio network technologies There are however fundamental limits to communications and radio resource is scarce in the face of demand This gives rise to new challenges in jointly managing resource allocation and interference management in a cognitive manner The first cognitive radio wireless standard IEEE 802 22 was only published in 2011 whereby white space referring to the unused frequency spectrums that are location specific in television channels can be identified for use by other devices in a cognitive radio network Recently the U S Defense Advanced Research Projects Agency has also recognized the importance of wireless cognitive radio network technologies in military and civilian applications and organized the 2017 DARPA Spectrum Collaboration Challenge to spur new ideas and experimentation to overcome spectrum scarcity The need to cognitively access the increasingly crowded electromagnetic spectrum has never been greater This book written by a team of leading experts aims at providing the readers with a series of tutorials on a variety of cognitive radio network technologies ranging from efficient dynamic spectrum sharing and interference management to optimal resource allocation and to fundamental limits in communications Emphasis is on cutting edge research in theoretical tools algorithms and engineering insights to provide guiding principles making this an ideal reference book

Channel Sensing in Cognitive Radio by Using MATLAB. N.

Krishna Chaitanya, Bimal Bhattarai, Ashok Subedi, 2018 The development in wireless communication along with various applications has put so many limitations on the use of radio spectrum. When we look at spectrum utilization most of the times the radio spectrum is not used properly. Some of the frequency bands in the spectrum are unoccupied, some frequency bands are less occupied, and a few bands are heavily occupied. Cognitive radio is the novel concept which can successfully deal with the growing demand and scarcity of wireless spectrum by effectively utilizing the unoccupied frequency bands. Cognitive radio is an intelligent wireless architecture which searches the spectrum holes and allows unlicensed users to access licensed spectrum bands. Spectrum sensing is used to detect the spectrum holes providing high spectrum resolution capability. We have generated an experimental model of cognitive radio system using MATLAB. In this paper we delve into the idea of simulating cognitive radio system for effective utilization of vacant frequency bands. The performance of cognitive radio has been tested using MATLAB R2012a.

Layer-2 Configuration Algorithms for Cognitive Radio Networks

Srinivasan Krishnamurthy, 2006 Cognitive radio networks : worldwide standards and spectrum regulation

Kiran Challapali, 2012 CoRoNet, **Design and Analysis of Opportunistic MAC Protocols for Cognitive Radio Wireless Networks**

Hang Su, 2012 As more and more wireless applications services emerge in the market, the already heavily crowded radio spectrum becomes much scarcer. Meanwhile, however, as it is reported in the recent literature, there is a large amount of radio spectrum that is underutilized. This motivates the concept of cognitive radio wireless networks that allow the unlicensed secondary users (SUs) to dynamically use the vacant radio spectrum which is not being used by the licensed primary users (PUs). In this dissertation, we investigate protocol design for both the synchronous and asynchronous cognitive radio networks with emphasis on the medium access control (MAC) layer. We propose various spectrum sharing schemes, opportunistic packet scheduling schemes, and spectrum sensing schemes in the MAC and physical (PHY) layers for different types of cognitive radio networks, allowing the SUs to opportunistically utilize the licensed spectrum while confining the level of interference to the range the PUs can tolerate. First, we propose the cross-layer based multi-channel MAC protocol which integrates the cooperative spectrum sensing at PHY layer and the interweave-based spectrum access at MAC layer for the synchronous cognitive radio networks. Second, we propose the channel hopping based single transceiver MAC protocol for the hardware-constrained synchronous cognitive radio networks under which the SUs can identify and exploit the vacant channels by dynamically switching across the licensed channels with their distinct channel hopping sequences. Third, we propose the opportunistic multi-channel MAC protocol with the two-threshold sequential spectrum sensing algorithm for asynchronous cognitive radio networks. Fourth, by combining the interweave and underlay spectrum sharing modes, we propose the adaptive spectrum sharing scheme for code division multiple access (CDMA) based cognitive MAC in the uplink communications over the asynchronous cognitive radio networks where the PUs may have different types of channel usage patterns. Finally, we develop a packet scheduling scheme for the PU MAC protocol in the context of time division multiple

access TDMA based cognitive radio wireless networks which is designed to operate friendly towards the SUs in terms of the vacant channel probability We also develop various analytical models including the Markov chain models M/G/1 queueing models cross layer optimization models etc to rigorously analyze the performance of our proposed MAC protocols in terms of aggregate throughput access delay and packet drop rate for both the saturation network case and non saturation network case In addition we conducted extensive simulations to validate our analytical models and evaluate our proposed MAC protocols schemes Both the numerical and simulation results show that our proposed MAC protocols schemes can significantly improve the spectrum utilization efficiency of wireless networks
