

UNIVERSITY MANAGEMENT SYSTEM PROJECT REPORT PDF

University Management System Project Description

University Management System is a clever, versatile, and cost-effective solution for universities, colleges, and schools. It's a whole end-to-end system that takes care of every detail of a university workflow, which is exactly what we needed.

The University Management System (UMS) is a cloud-based university management system that addresses all elements of colleges, universities, and schools. It offers an easy-to-use interface for managing university workflow and integrating all university procedures.

University Management System Project Abstract

Abstract: University management system project is a web-based solution for colleges, universities, and schools. It was created for the university and its affiliated institutions to conduct, monitor, and analyze complicated activities such as student admission, examinations, and much more. It is a program that manages the complete student life cycle up to degree completion.

IUMS helps make important tasks like admission, results processing, registration, and fee management more efficient, so they can be done faster. All users, including students, college and university personnel, paper valuers, setters, and moderators, are given a role-based login/password to complete their tasks. Each student has access to an online tool through the university's examination management system to complete the following Student Lifecycle tasks. This is available to all students.

University Management System Project Modules:

University Information Management: This module will help the university admin in handling the records and services offered by the school. It will secure and generate reports for transaction purposes.

Courses and Subject Management: As the main goal of every school is to provide a quality education, this module would ease the activity of handling courses and subjects. The system will help the admin assign the subjects per course and then bracket its schedules.

Student Information Management: The student information management cost a lot of time and effort to do. While this module will do the management, the admin would just feed the information to the system.

Faculty and Student Attendance Monitoring: This module might require a device to monitor the attendance of each of their students and faculty. This will help them handle the performance of their student as well as their faculty members.

Grading System Management: The work of this modules is to help the admin convey learning progress and performance of their students in a clear, accurate, consistent, and fair manner.

Payment and Financial Monitoring: This module will give them hold of all the payment transaction of their students or their parents. It will also help the admin with securing their financial statements for the university needs and purposes.

Supply Management: Supply Management module helps the school admin with the management of every supply inside the university.
