Airways Smooth Muscle David Raeburn,Mark A. Giembycz,2013-03-09 Many factors may influence the release of neurotransmitters from airway nerves 1 This is likely to be important in physiological control of airway functions and may be particularly relevant in airway diseases such as asthma and chronic obstructive pulmonary disease COPD Neural elements in airways interact in a complex manner and the activation of certain neural pathways may profoundly influence the release of transmitters from other neural pathways Similarly inflammatory mediators released from inflammatory cells in the airways may also modulate neurotransmitter release There are marked differences between species in airway innervation and in neuromodulatory effects and wherever possible studies in human airways have been emphasised although information on neuromodulation in human airways is somewhat limited at present Release of neurotransmitters from nerve terminals occurs via a Ca^{2+} dependent secretion evoked by a nerve action potential but may also be evoked experimentally by a high extracellular K concentration which directly depolarises the nerve terminal membrane Modulation refers to the alteration of neurotransmitter release which may either be increased facilitation or reduced inhibition by the action of a particular agent thus changing the magnitude of the neurally mediated response Such agents would normally act on receptors on the nerve terminal which are referred to as pre junctional or presynaptic receptors in contrast to post junctional or post synaptic receptors located on the target cells which are influenced by that particular transmitter

Muscle Laszlo Szekeres, Julius G. Papp, 2012-12-06 Eighty years have passed since Arthur Heffter the founder of this handbook series invited in 1913 eminent scientists from different parts of the world to contribute. At that time 6-10 years were needed to publish the first two volumes which appeared between 1919 and 1923. During these 80 years pharmacology as an independent science has undergone tremendous development which is reflected truly and comprehensively by the ever growing number of volumes in the now classic series of Heffter-Heubner's Handbook of Experimental Pharmacology. The Editorial Board of distinguished world wide known experienced pharmacologists assumed responsibility for finding and editing the most current and most interesting topics keeping in mind that some evergreen topics should be brushed up from time to time when sufficient new knowledge has accumulated. In this sense it is surprising that the highly popular topic of ever growing importance namely pharmacology of smooth muscle has in the knowledge of the editors of this volume never been treated as such. Even the volume on the structure and function of smooth muscle edited by Birnbaumer, Brading, Jones and Tomita (Smooth Muscle 1981) is more than 12 years old. So we think it is justified to say that the present volume really fills a gap. We were lucky to be able to invite eminent scientists working in this field and persuade them of the importance of their contributions which cover the most important aspects of this wide ranging topic.
