Climate Change Adaptive Capacity And Sustainable Development

Susanne Moser, Maxwell Boykoff

Climate Change Adaptive Capacity And Sustainable Development:

Climate Change, Adaptive Capacity and Development Joel B. Smith, Saleemul Huq, Richard J. T. Klein, 2003 The Third Assessment Report of the Intergovernmental Panel on Climate Change IPCC has presented strong evidence that human induced climate change is occurring and that all countries of the world will be affected and need to adapt to impacts The IPCC points out that many developing countries are particularly vulnerable because of their relatively low adaptive capacity

How to Deal with Climate Change? Beatrice Mosello, 2015-03-03 As the evidence for human induced climate change becomes more obvious so too does the realisation that it will harshly impact on the natural environment as well as on socio economic systems Addressing the unpredictability of multiple sources of global change makes the capacity of governance systems to deal with uncertainty and surprise essential However how all these complex processes act in concert and under which conditions they lead to the sustainable governance of environmental resources are questions that have remained relatively unanswered This book aims at addressing this fundamental gap using as case examples the basins of the Po River in Northern Italy and the Syr Darya River in Kyrgyzstan The opening chapter addresses the challenges of governing water in times of climate and other changes Chapter Two reviews water governance through history and science The third chapter outlines a conceptual framework for studying institutional adaptive capacity The next two chapters offer detailed case studies of the Po and Syr Darya rivers followed by a chapter length analysis and comparison of adaptive water resources management in the two regions The discussion includes a description of resistant reactive and proactive institutions and puts forward ideas on how water governance regimes can transition from resistant to proactive The final chapter takes a high level view of lessons learned and how to transform these into policy recommendations and offers a perspective on embracing uncertainty and meeting future challenges

Sustainable Adaptation to Climate Change Katrina Brown, Eriksen Siri, 2012-06-25 This book sets out how to ensure that adaptation efforts are socially and environmentally sustainable contributing to poverty reduction as well as confronting the processes driving vulnerability Over 100bn a year is pledged to help finance adaptation projects via the The Climate Adaptation Fund These projects and their funding played a central role in the latest climate talks in Cancun Mexico ensuring that adaptation to climate change will be an international priority over the next few decades Many existing adaptation projects are however not environmentally or socially sustainable Adaptation projects that focus on reducing specific climate sensitivities can even if bringing benefits adversely affect vulnerable groups and create social inequity or even unintentionally undermine environmental integrity Sustainable Adaptation to Climate Change examines how adaptation to climate change types of measures policy frameworks and local household strategies interacts with social and environmental sustainability A mixture of conceptual and case study based papers draw on research from Europe Asia and Africa It will be of interest to all researchers and policymakers in climate change adaptation and development

Building Institutions for Resilience Andrew Simmons, Andree-Ann Simmons, 2023-04-29 This volume uses a

case study approach to present data on the relevance and effectiveness of the strategic actions implemented by NGOs IGOs and governments at national regional and international scales drawing lessons and recommendations to enhance the capacity of governments and institutions to deliver on climate change adaptation and sustainable development initiatives The authors provide insights to policymakers community leaders students and researchers working on climate change adaptation and resilience building practices and strategies in vulnerable communities including small island developing states and post conflict states focusing on innovative management practices and institutional capacity building The cases presented here provide insights into how institutions can strengthen local national and regional capacities to adapt to climate change and other calamities Integrating Climate Change Actions Into Local Development Livia Bizikova,John Robinson,Stewart

Cohen,2015-02-13 To date climate change adaptation and mitigation have been treated separately both in research and in the climate negotiations However a growing body of literature is now being developed that points to actual and potential synergies and trade offs between responses to climate change and sustainability This literature has evolved in a spontaneous way with diverse approaches and no common methodology to help practitioners explicitly plan for these synergies This special issue of the Climate Policy journal addresses this gap between scientific knowledge and practitioners needs by focussing on linkages between climate change and sustainable development at the level of conceptual framework and methods In particular the papers address in an integrated way local development options involving both adaptation and mitigation in order to promote resilience to climate change in human and natural systems The special issue provides policy and methodological guidelines for linking local development pathways with responses to climate change based on collaboration between local practitioners the public and scientists **Climate Change Adaptation and International**

Development Ryō Fujikura,Masato Kawanishi,2011 Offering lessons for integrating climate change adaptation into development assistance this text provides case studies from ten countries across Africa and Asia *Climate Change Adaptation and Development* Tor Håkon Inderberg,Siri Eriksen,Karen O'Brien,Linda Sygna,2014-11-20 Climate change poses multiple challenges to development It affects lives and livelihoods infrastructure and institutions as well as beliefs cultures and identities There is a growing recognition that the social dimensions of vulnerability and adaptation now need to move to the forefront of development policies and practices This book presents case studies showing that climate change is as much a problem of development as for development with many of the risks closely linked to past present and future development pathways Development policies and practices can play a key role in addressing climate change but it is critical to question to what extent such actions and interventions reproduce rather than address the social and political structures and development pathways driving vulnerability The chapters emphasise that adaptation is about much more than a set of projects or interventions to reduce specific impacts of climate change it is about living with change while also transforming the processes that contribute to vulnerability in the first place This book will help students in the field of climate change and

development to make sense of adaptation as a social process and it will provide practitioners policymakers and researchers working at the interface between climate change and development with useful insights for approaching adaptation as part of a larger transformation to sustainability

Integrating Climate Change Adaptation into Development Co-operation: Policy Guidance OECD,2009-11-17 This book provides essential information and advice on how to facilitate the integration of climate change adaptation into development processes

Ecological Footprints of Climate Change Uday Chatterjee,Angela Oyilieze Akanwa,Suresh Kumar,Sudhir Kumar Singh,Abira Dutta Roy,2023-01-01 This book explores global implications of human activities that trigger changes in climate and the appropriate scientific adaptive and sustainable approaches as a proven information tool It reveals that the ecological social and economic dynamics of the changing earth encompasses huge uncertainties coupled with its ability to be linked to other forms of global change From a scientific perspective multiple efforts are expedient to integrate the many aspects of global changes Increases in science and technology have afforded nations the ability to plan for the future by investing in adaptive and mitigative measures to monitor present and future changes Just as the climatic and ecological impacts of climate change are unequally distributed so is the adaptive capacity to cope with these impacts in different nations Considering that wealth infrastructure and political stability all contribute to a nation s capacity to anticipate and respond to change So global South nations who are disadvantaged in these areas are faced with more inequalities and more unique adaptive strategies There is need for increased aggregate efforts and interaction between scientists stakeholders and policy makers to improve both decision making and global change in science Scientists and researchers need to work on expanding the range of policies that are proposed debated and implemented This way novelty new ideas and methodologies are infused into the society At this point of multiple climate footprints there is an immense need to explore all ideas evaluating their possibilities in presenting alternative futures developing alternative policies and adaptive options to solve the intractable ecological footprints of climate change

Achieving Sustainable Development in an Age of Climate Change Nations Unies. Committee for Development Policy,United Nations. Economic and Social Council. Committee for Development Policy,2009 Adapting to climate change is critical for sustainable development Steps must be taken to strengthen the adaptive capacity of all stakeholders and to mainstream adaptation into sectoral and national planning processes Achieving the aims reflected in the international sustainable development agenda also requires mitigation efforts in accordance with the principle of common but differentiated responsibilities Whereas among industrialized countries the approach to mitigation has focused on a cap and trade system for developing countries such a strategy may not be ideal For those countries an investment based approach encouraging the use of renewable energy alternatives appears to be the most promising mitigation strategy In support of such approach large scale global funds for technology transfer required for mitigation and for helping countries cover adaptation costs should be considered Publisher s description

Adaptation to Climate Change in Southern

Africa Steffen Bauer, 2015-02-13 Adverse climate impacts are already evident across Southern Africa and pose a serious threat to the development prospects of the region's societies Sustainable development in this region will depend on the rapid development and implementation of effective adaptation measures This volume identifies the new socioeconomic and political boundaries to development that result from ongoing climate change in Southern Africa The collected papers explore the region's potential for a transition to development strategies that combine meaningful socioeconomic investment and adaptation measures while also improving livelihoods in the region The chapters are backed up by detailed case studies which underscore the urgent need for national governments and multilateral agencies to develop strategies to support Southern Africa's societies in adapting to climate change

Adaptation to Climate Change through Water Resources

Management Dominic Stucker, Elena Lopez-Gunn, 2014-08-27 The impacts of human induced climate change are largely mediated by water such as alterations in precipitation and glacial melt patterns variations in river flow increased occurrence of droughts and floods and sea level rise in densely populated coastal areas Such phenomena impact both urban and rural communities in developed emerging and developing countries Taking a systems approach this book analyzes evidence from 26 countries and identifies common barriers and bridges for local adaptation to climate change through water resources management It includes a global set of case studies from places experiencing increased environmental and social pressure due to population growth development and migration including in Africa Asia Australia Europe North and South America All chapters consider the crosscutting themes of adaptive capacity equity and sustainability These point to resilient water allocation policies and practices that are capable of protecting social and environmental interests whilst ensuring the efficient use of an often scarce resource

Climate Change 2001: The Scientific Basis

J. T. Houghton, Y. Ding, D. J. Griggs, M. Noguer, P. J. van der Linden, X. Dai, K. Maskell, C. A. Johnson, 2001-07-12 Climate Change 2001 The Scientific Basis is the most comprehensive and up to date scientific assessment of past present and future climate change The report Analyses an enormous body of observations of all parts of the climate system Catalogues increasing concentrations of atmospheric greenhouse gases Assesses our understanding of the processes and feedbacks which govern the climate system Projects scenarios of future climate change using a wide range of models of future emissions of greenhouse gases and aerosols Makes a detailed study of whether a human influence on climate can be identified Suggests gaps in information and understanding that remain in our knowledge of climate change and how these might be addressed This latest IPCC assessment will again form the standard scientific reference for all concerned with climate change and its consequences including students and researchers in all aspects of environmental and atmospheric science and policymakers in governments and industry worldwide

Small Island Developing States

Climate Change Adaptation and Development John Carstensen, 2018-04-19 Climate change is real and it is man made We have put so many greenhouse gas pollutants into the atmosphere that we will see significant and long term change that we need to adapt and adjust to It is important for development practitioners to understand these impacts and the challenge of how and when to adapt to climate change There are plenty of grim presentations of what the extremes of the possible climate scenarios will throw at us over

the next 100 years but not all change will be disastrous some change will be beneficial but much of the change will happen at an unprecedented rate that will require the best possible analysis and understanding of how and when we should adapt to climate change This is important for development practitioners as we invest in ensuring that poverty is reduced and eliminated and the well being of everyone is improved Many countries and communities around the world are vulnerable to the impacts of climate change but developing economies may on one hand be less resilient to the impact but could on the other hand be in a better position to make their development climate smart by making the most efficient use of their economic resources The chapters in this book shine a light on the complexity and the multi dimensional aspects of climate change adaptation They gather some of the experiences of addressing climate change impacts in a development context This book was previously published as a special issue of Development in Practice

Creating Resilient Futures Stephen Flood, Yairen Jerez Columbié, Martin Le Tissier, Barry O'Dwyer, 2021-10-31 This open access edited volume critically examines a coherence building opportunity between Climate Change Adaptation the Sustainable Development Goals and Disaster Risk Reduction agendas through presenting best practice approaches and supporting Irish and international case studies The Covid 19 pandemic has highlighted existing global inequalities and demonstrated the scope and scale of cascading socio ecological impacts The impacts of climate change on our global communities will likely dwarf the disruption brought on by the pandemic and moreover these impacts will be more diffuse and pervasive over a longer timeframe This edited volume considers opportunities to address global challenges in the context of developing resilience as an integrated development

continuum instead of through independent and siloed agendas

Successful Adaptation to Climate Change Susanne Moser, Maxwell Boykoff, 2013-07-18 What does successful adaptation look like This is a question we are frequently asked by planners policy makers and other professionals charged with the task of developing and implementing adaptation strategies While adaptation is increasingly recognized as an important climate risk management strategy and on the ground adaptation planning activity is becoming more common place there is no clear guidance as to what success would look like what to aim for and how to judge progress This edited volume makes significant progress toward unpacking the question of successful adaptation offering both scientifically informed and practice relevant answers from various sectors and regions of the world It brings together 18 chapters from leading experts within the field to present careful analyses of different cases and situations questioning throughout commonly avowed truisms and unspoken assumptions that have pervaded climate adaptation science and practice to date This book offers not one answer but demonstrates how the question of success in important ways is normative and context specific It identifies the various dimensions of success such as economic political institutional ecological and social explores the tensions between them and compiles encouraging evidence that resolutions can be found The book appraises how climatic and non climatic stressors play a role what role science does and can play in adaptation decision making and how trade offs and other concerns and priorities shape adaptation planning and implementation on the ground This is timely interdisciplinary text sheds light on key issues that arise in on the ground adaptation to climate change It bridges the gap between science and practical application of successful adaptation strategies and will be of interest to both students academics and practitioners
