Introduction to Supply Chain Management Technologies David Frederick Ross, 2010-10-12 It is almost impossible to conceive of the concept and practical application of supply chain management SCM without linking it to the enabling power of today's information technologies Building upon the foundations of the first edition *Introduction to Supply Chain Management Technologies* Second Edition details the software toolsets and suites **The House of Value Creation** Hanno Schmidt-Gothan, Karsten Gessner, Hauke Lübben, 2002-08-30 The House of Value Creation HVC methodology developed by the authors in the course and as a result of their consulting engagements summarizes and systematizes corporate strategies which lead to significant and sustainable shareholder value creation The book offers a practical how to guide for focusing management ambitions on increasing capital market value The examples of the Electronics High Tech industries illustrate that some best in class companies manage to detach themselves from overall market developments and continuously surpass their peers through superior strategies and business architectures Paper Tigers, Hidden Dragons Douglas B. Fuller, 2016-05-19 China presents us with a conundrum How has a developing country with a spectacularly inefficient financial system coupled with asset destroying state owned firms managed to create a number of vibrant high tech firms

China's domestic financial system fails most private firms by neglecting to give them sufficient support to pursue technological upgrading even while smothering state favoured firms by providing them with too much support. Due to their foreign financing multinational corporations suffer from neither insufficient funds nor soft budget constraints but they are insufficiently committed to China's development. Hybrid firms that combine ethnic Chinese management and foreign financing are the hidden dragons driving China's technological development. They avoid the maladies of China's domestic financial system while remaining committed to enhancing China's domestic technological capabilities. In sad contrast China's domestic firms are technological paper tigers. State efforts to build local innovation clusters and create national champions have not managed to transform these firms into drivers of technological development. These findings upend fundamental debates about China's political economy. Rather than a choice between state capitalism and building domestic market institutions China has fostered state capitalism even while tolerating the importing of foreign market institutions. While the book's findings suggest that China's state and domestic market institutions are ineffective the hybrids promise an alternative way to avoid the middle income trap. By documenting how variation in China's institutional terrain impacts technological development the book also provides much needed nuance to widespread yet mutually irreconcilable claims that China is either an emerging innovation power or a technological backwater. Looking beyond China hybrid led development has implications for new alternative economic development models and new ways to conceptualize contemporary capitalism that go beyond current domestic institution centric approaches.
